

Changing workstyles brought on by unprecedented disruptions are forcing business leaders to rethink how their employees work. In doing so, organizations must deploy solutions to support a geographically dispersed, remote/mobile workforce.

Communication and collaboration are at the forefront of this challenge as face-to-face meetings are no longer the default. Do your workers have what they need as they transition to remote work?

### 1 WHAT YOU NEED: **HARDWARE**

*Do your employees have the devices they are comfortable with? Devices that allow them to do their job easily and effectively?*

### 2 WHAT YOU NEED: **SOFTWARE**

*Do your workers have access to the productivity applications they need to do their jobs?*

### 3 WHAT YOU NEED: **COLLABORATION**

*Can your workers collaborate seamlessly with their co-workers, across locations and time zones?*

### 4 WHAT YOU NEED: **SECURITY & GOVERNANCE**

*Are you providing your mobile workers with secure connectivity and application delivery while adequately protecting your data?*

### 5 WHAT YOU NEED: **TRAINING & ENABLEMENT**

*Can you ensure your workers understand their tools and perform their tasks?*
