# Secure Access Service Edge

How can SHI's Advanced Solutions Group and Security Engineers help modernize your security architecture?

## Challenge

Companies are increasingly choosing remote work options and capabilities, and security needs to follow. Backhauling all traffic back to the data center using expensive connections isn't ideal for users, application performance, or security teams. A modern architecture can improve security posture while increasing performance.

## Use Cases

- Many branch or remote locations
- Increasing mobile workforce
- Expensive MPLS connections
- Decreasing usage of VPN
- Increasing amount of cloud usage (i.e. IaaS, SaaS, etc.)

## How Can SHI Help?

SASE can be somewhat complex when you think about all the related components and how they work together. Let SHI help simplify this by having a discussion with our Advanced Solutions Group with experts in both the network and security space. Talking about key objectives, architectures and roadmaps can help prioritize next steps in your modernization efforts. You will be SASE before you know it.
