

# Track, manage and support your public clouds, in one spot

According to a recent Gartner survey, 81% of enterprises are now working with more than one cloud provider to ensure they get the best price and the most advanced capabilities. However, as your multi-cloud footprint grows, so do the challenges: loss of visibility, increased management costs, and increased exposure to security, compliance and audit risks.

Our SHI One Management Platform gives everyone on your team, from procurement to the C-Suite, a centralized portal to track, manage and support all your public clouds. Spend less time struggling with reports, management and support, and more time on the strategic initiatives driving your business forward.

## Multi-cloud management made easy, secure and efficient.

Visibility into all major public clouds, including Microsoft Azure, Microsoft Office 365 and more.

Streamline support with access to self-service capabilities and expedited ticket features.

Securely manage identity and access with single sign-on, native Azure AD integration and granular role-based controls.

Give procurement visibility and analytics across IT projects, cloud consumption, licensing and services.

Optimize spending and cut waste with a 360-degree view of cloud usage and proactive recommendations from our experts.

Track and request IT services managed by SHI directly in the portal.
