with the CSE-800, your weapon of choice for your boardrooms

BARCO

Visibly yours

Plug into efficiency

Introducing **ClickShare**.
Simple to integrate, easy to use

ClickShare works through a USB-powered Button that shares users' devices with the main meeting room screen in seconds.

Installation is quick and easy, with no software to download, no training required and no cables to clutter meeting room tables.

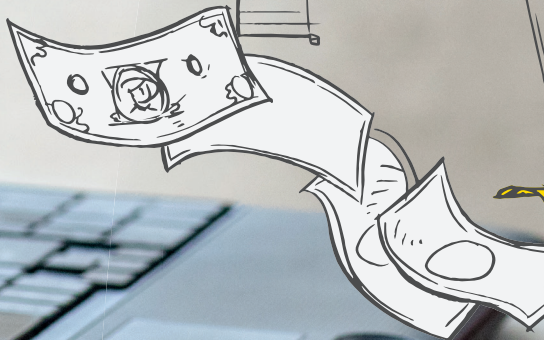

The technology is compatible with any device - either through the intuitive Button or the companion app.

ClickShare
makes meetings
more efficient.

ENGAGE

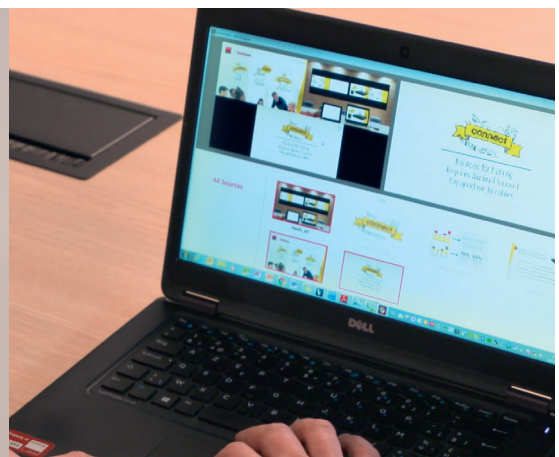

Tap into amazing

The **CSE-800**,
the weapon of choice for your board room.

The CSE-800 builds on the groundbreaking ClickShare meeting room experience with a range of features and specifications designed especially for the large meeting room and boardroom.

These stand for a unique user experience, even better collaboration and bring a boardroom solution that pays for itself. With the cost of replacing frayed or damaged meeting room cables and dongles, the ClickShare CSE-800 soon delivers a strong return on investment.

IT support is minimal and trouble tickets are reduced significantly, slashing total cost of ownership. No more complexity in your boardroom means stress free meetings for all your board members and prevents your IT manager from running a marathon a year to support meeting rooms.

Integration that lowers your total cost of ownership

With the CSE-800 in your large meeting room or boardrooms, you can get rid of the basic matrix switchers, scalers and cables in there. Connect any legacy HDMI input like a camera, stationary pc or a videoconferencing device to the ClickShare base unit and this input comes automatically on screen. No more fiddling with touch screen panels or struggling with getting the right source and lay-out on your screen.

Like any ClickShare, the CSE-800 is display agnostic. So whether you connect it to a projector or an LCD screen, it will automatically set its resolution. With 2 outputs delivering up to a 4K DCI resolution, you can now discuss content with 4 people sharing a crisp full HD presentation on one display at the same time.

The CSE-800 can easily be integrated in your company network. Present with confidence that sensitive data is safe behind three configurable levels of robust, enterprise-grade security. Everyone within the company can share without problems. Whether you are a guest or an enterprise user, sharing is intuitive and straightforward.

Focus on the content of your meeting

With the option of connecting two 4K screens and sharing the presentations of up to 8 people at the same time, it is extremely important to keep the focus in your meeting room. Monitoring and selecting what you discuss and share on screen, can help.

For the first time we bring moderation to the ClickShare device. Today the CSE-800 is the only ClickShare model with this feature. With the ClickShare button you can launch a client from which you select and moderate what you share on the meeting room screen. No installation or training needed. Whether you are a consultant, a guest or a corporate employee, you can plug in the ClickShare button and start moderation.

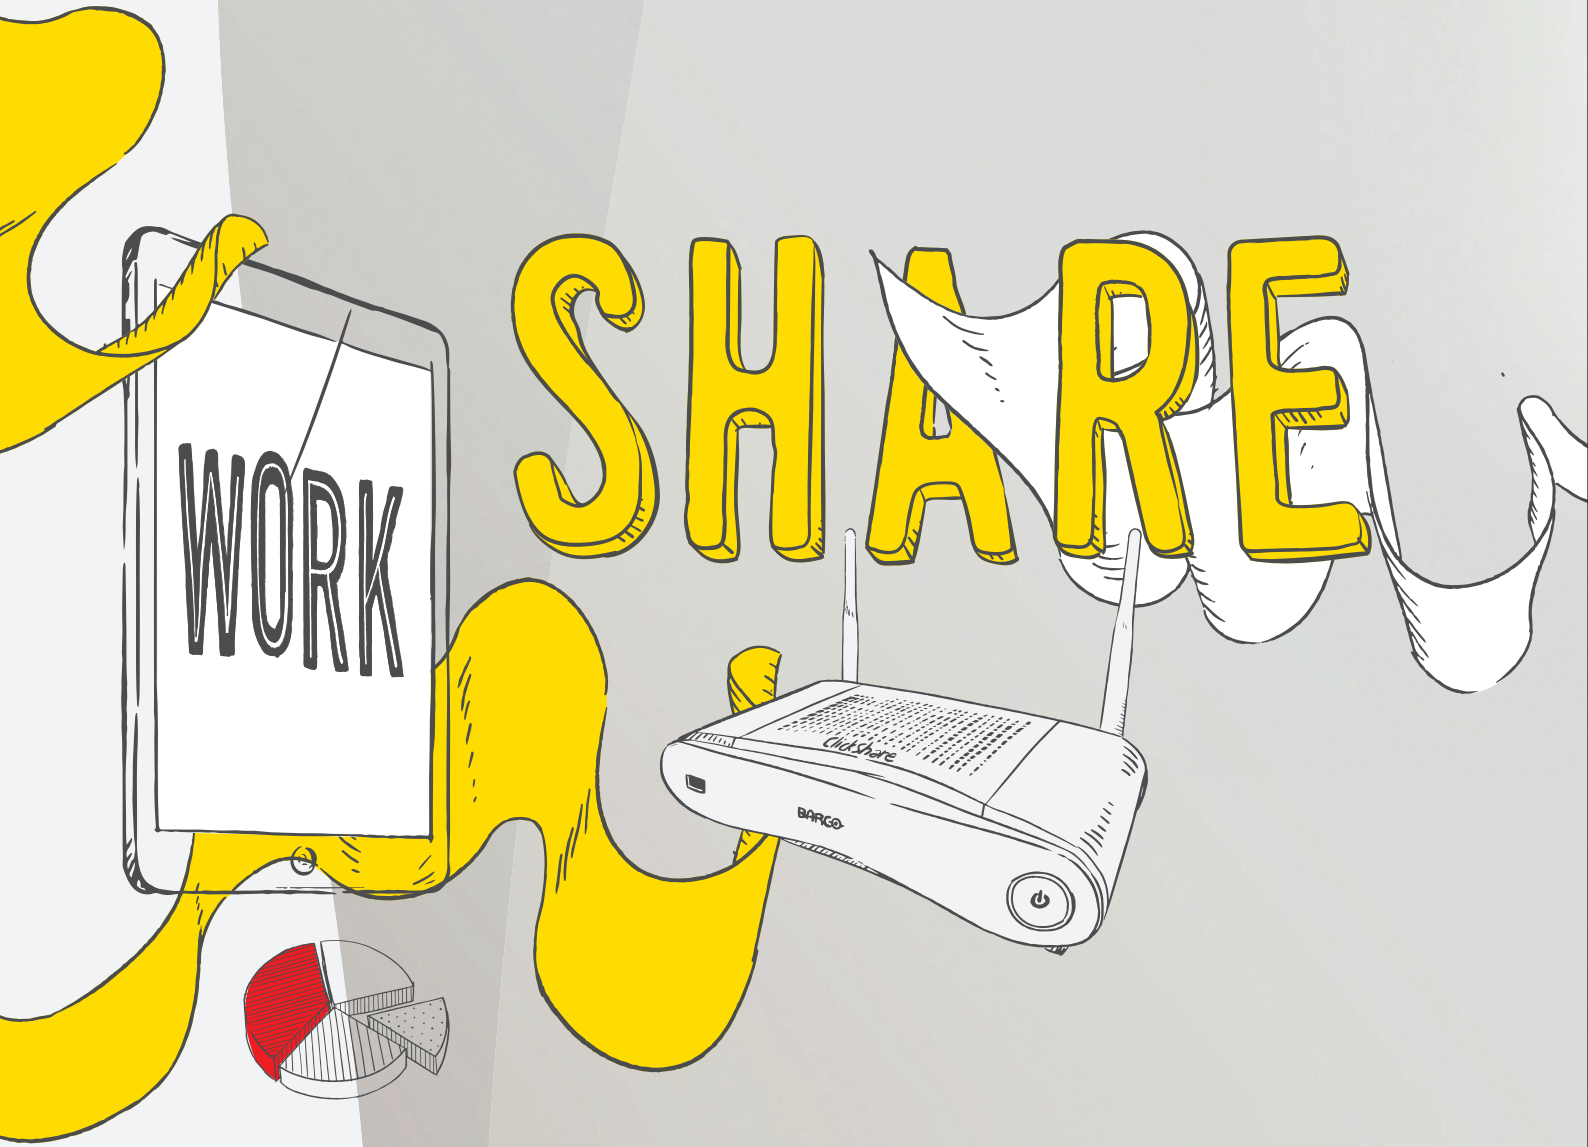

True collaborative experience

The CSE-800 enables a true collaborative experience by enhancing touch panels with blackboarding and annotation. Discuss presented content and make annotations or notes while doing so, creating an elaborated environment for ideation.

Since the CSE-800 always keeps ease of use top of mind, it gives the option to wrap up your meeting in seconds. Because whenever a meeting ends, first thing the meeting participants do, is close their laptop and rush out to the next meeting. There is no time to distribute notes or share via usb. Just touch the blackboard and press on the save icon, and everyone connected with a ClickShare Button gets the pdf automatically on their laptop. Whether you are a consultant, guest or corporate employee it takes no installation, just a split second and you are off to your next appointment.

STRESS
FREE

No wires

ClickShare's universal USB-powered Button and ClickShare app for iOS and Android avoids the unsightly jumble of cables often seen in meeting rooms. It requires no special adaptor or port – so there's no need to carry additional wires or rummage under the table. And with no cables, you'll spend less time setting-up and more time being productive.

Simplicity

ClickShare couldn't be simpler. Everything works with the tap of a button, leaving nothing more to figure out. Connecting ClickShare does not alter your screen size or resolution, so what you see on your laptop screen is replicated on the big meeting room screen.

Cross devices

Whether you present from a PC, Mac, tablet or smartphone, ClickShare has it covered. As well as the USB-powered ClickShare Button, the ClickShare app for iOS and Android expands meeting effectiveness to include content sharing from mobile devices.

No software

When you plug in a ClickShare Button, there's no software to download and install. You simply accept an executable file and you're ready to go. Once finished, ClickShare leaves no software on your PC or Mac.

Stress-free

Technology is on your side with ClickShare, its intelligence works everything out for you. With ClickShare in a meeting room, you can feel confident that your important presentation will transfer to the big screen at the tap of a button.

Intuitive

One tap of the ClickShare Button gives you the quickest and most efficient way to access a meeting room big screen. When you use ClickShare for the first time, you'll wonder why you tolerated the hassle of cables for so long.
