

Sync & Recover for Exchange and Office 365™

Automated Data Recovery and Advanced Email Management Tools

Simplified Business Continuity for Email

Spiraling email use for business has led to swollen inboxes and growing management challenges for both employees and administrators. Sync & Recover for Exchange and Office 365 offers three modules to expand on the email management capabilities provided by Mimecast Archiving alone. These are:

- Sync & Recover Tools
- Granular Retention Management
- Mailbox Storage (Stubbing) Management

Sync & Recover Tools

Sync & Recover Tools streamline the recovery of mailboxes, calendar items and contact lists impacted by unwanted deletion or corruption. This module reduces the need for organizations to deploy dedicated email backup and recovery products or services for their Office 365 environments without the need for any hardware or software. Organizations can even leverage Sync & Recover Tools as part of a layered defense – in conjunction with Mimecast Targeted Threat Protection (TTP) and Mimecast Continuity services – against malware attacks. This layered malware risk mitigation approach combines industry-leading prevention of email-borne cyber exploits, simplified recovery of email data in case of breach, and email service continuity, all managed from a unified, intuitive administrative console.

This module also replicates folders from individual and shared Outlook mailboxes – vital resources for simplifying search and speeding workflows – in the Mimecast Cloud Archive. This provides vital access to folder structures and shared mailbox content even in the wake of email service disruption. Replicated folder structures in the Mimecast archive give users a fast and familiar search capability whether they use Outlook, the Mac app, mobile devices or the Mimecast Personal Portal.

KEY FEATURES:

- Automated sync up to 6 times per day, with tracking of all changes
- Automated mailbox size management
- Rapid recovery of mailboxes, personal folders, calendar items, and contact lists
- Consistent folder structure within the Mimecast archive across Outlook, mobile device and Mimecast Personal Portal interfaces
- Ability to configure retention policies based on email metadata and Active Directory group attributes

BENEFITS AT A GLANCE:

- Unified management of compliance archiving and data resiliency
- Streamlined configuration of recovery and search
- Multilayered defense against Exchange data loss or damage due to ransomware and other malware
- Cloud-to-cloud backup; no hardware or software to manage
- Access to replicated folders and emails across all Mimecast apps
- Always-on archive access, even during Exchange downtime

Granular Retention Management

Granular Retention Management gives administrators an easy way to apply and manage policy-based retention of email content and metadata. This module lets administrators define retention policies at an Exchange folder or mailbox level.

Sync & Recover Tools for Exchange and Office 365

Sync & Recover Tools

Mailbox Storage Management

Granular Retention Management

They can even automate complex, custom rules for user archive retention, administrative retention, and expiry. Administrators can apply policies based on email metadata, Active Directory group membership and attributes. This capability also lets administrators apply multiple retention period scenarios, including split retention across the user base.

Mailbox Storage Management

The Mailbox Storage Management feature uses native Exchange entry points to identify and take action on email messages and attachments lets you keep messages visible in mailboxes while freeing space in Exchange Server.

Advanced Data Resilience, Simplified

- **Simplified Administration.** Manage compliance archiving and data resiliency from a single Administration Console, without the need for dedicated backup and recovery solutions.
- **Streamlined Recovery.** Automate recovery and search easily, to recover individual items, entire mailboxes or folders.
- **Comprehensive Ransomware Protection.** In conjunction with TTP and Continuity, Sync & Recovery delivers a ransomware defense that addresses the full attack cycle.
- **Cloud-based Efficiency.** Cloud-to-cloud backup technology with no hardware or software to manage.
- **Flexible Deployment.** Support for complex, global messaging environments and hybrid cloud.

Mimecast (NASDAQ: MIME) makes business email and data safer for thousands of customers with millions of employees worldwide. Founded in 2003, the company's next-generation cloud-based security, archiving and continuity services protect email and deliver comprehensive email risk management
