Learn about NETGEAR and ZeeVee's successes as partners in AV over IP

Strong partners always make for better solutions and ZeeVee has been a great partner of NETGEAR for many years. As founding members of the SDVoE Alliance, they have worked together to promote a better way to switch AV signals through the power of Networked AV. This partnership has brought a new paradigm in AV over IP with the introduction of the ZeeVee HDMI encoder module made exclusively for the modular NETGEAR M4300-96X switch. Hear Bob Michaels, CEO of ZeeVee, discuss their partnership, detail a recent case study and more with Laurent Masia, Director of Product Line Management for Managed Switches at NETGEAR.

Power Up your Business with NETGEAR PoE+

The widespread adoption of IP telephone and increasing demand for network security cameras are projected to drive the industry demand of Power-over-Ethernet (PoE) switches. PoE devices encompass VoIP phones, IP Security Cameras, wireless access points, video-over-IP endpoints, proximity sensors, door locks and other IoT devices. Increasing numbers of such devices are offering richer features that also require PoE+ power (802.3at), which increases the power demands from the PoE supplying switches. Join Iphie Chen, Product Line Manager of Smart Managed Pro switches at NETGEAR, to learn more about what PoE+ switches NETGEAR offer to fulfill requirements of SMB network.

Insight Management for Higher Density WiFi Deployments

Insight has deepened its management capabilities of wireless networks and wireless access points, including management of the new WiFi 6/AX access points, making it ideal for higher-density WiFi deployments in schools, mid-sized offices and shared work spaces. Additionally managing your Orbi Pro and Orbi Pro WiFi 6 with Insight is now even easier. Learn about the new feature for wireless management with the Insight 5.11 release.

WiFi 6/Multi-Gig Support

Covid-19 has changed our work habits and network designs in many ways, big and small. One of those changes is the need to set up a high quality WiFi network at home, exclusively for work; and the need to set up a business WiFi access point with maximum flexibility and convenience, for any reason and at moment's notice. NETGEAR is launching a new WiFi 6 product line that enables customers to quickly set up a WiFi network at home and at work, with great coverage and throughput, and at an affordable, no prior budget approval needed prices.

Multigig/10G Connectivity and More PoE Power on New NETGEAR Switches

The number of devices with multi-gig capabilities and speed is increasing. Examples include WiFi 6 Access Points (eg WAX610 from NETGEAR), multi-gig or 10G NAS, etc. The challenge of supporting the modern applications and BYOD with more bandwidth and PoE power can be solved by a combination of Multigig/10G connectivity, PoE++ (802.3bt) and centralized management of network. Hear Iphie Chen, Product Line Manager of Smart Managed Pro switches at NETGEAR, to introduce the new NETGEAR Multigig/10G Smart Managed Pro switches.
