

SHI helps to automate, enhance and simplify device deployment, and we are uniquely positioned to offer you a **custom-care pack**, specially designed to support your remote learning initiatives. Our in-house data-capture collects the device identifiers and delivers them in a single spreadsheet, reducing your in-house asset management efforts.

1 Ordering Portal

Track your devices

We customize an Ordering Portal for your needs: Your portal offers order status, tracking information, and shipment details for each custom package we deliver.

2 Deployment

Our integration services ensure devices, critical accessories and branding are delivered to the right place at the right time. **Zero Touch Deployment** provides last-mile remote configuration with app installation, pre-enrolled to management, and the simplest setup experience for the end user.

3 Device Management

Apple School Manager streamlines enrollment into your **Mobile Device Management (MDM)** solution. The simple, web-based portal enables administrators to deploy and manage Apple devices seamlessly and with ease, adding capabilities to an MDM not available otherwise. Your IT team can now streamline deployments, manage configurations, distribute apps and content, and secure institution data at scale.
