Take advantage of “always-on” business solutions from Cisco

The flexibility of cloud technology is easy to see why. With cloud-based apps, employees can work together easily from any location, with improved efficiency and start-up time. Your cloud apps are always accessible and no matter where you are and at any given time, and there’s no reason your IT can’t work the same way. Putting networking and security in the cloud can help your small business in multiple ways.

Cloud and remotely managed IT gives you the flexibility to add and reduce services as needed. With more people working from home, you can quickly provide them access to cloud-based tools like videoconferencing and collaboration. Your employees can work productively and securely no matter where they’re located, bringing new or temporary employees onboard is fast and hassle free.

Optimize your cash flow

In an ever-changing business environment, controlling costs is essential. The move to cloud-based solutions lets you optimize physical locations and staff, both of which lowers your real estate, power, and travel expenses. The switch to recurring costs instead of buying equipment also reduces cash flow issues, and makes things more predictable.

Add or reduce services easily

Cloud and remotely managed IT gives you the flexibility to add and reduce services as needed. With more people working from home, you can quickly provide them access to cloud-based tools like videoconferencing and collaboration. Your employees can work productively and securely no matter where they’re located, bringing new or temporary employees onboard is fast and hassle free.

Save time

Small business owners have so many things to do, the last thing you need is to spend your time dealing with IT problems. Cloud solutions are more resilient than on-site IT, and they’re easier to install and deploy. Updates happen automatically, so you can focus on your business instead of dealing with patches and upgrades.

Simplify management

With cloud, you don’t need a large IT staff to securely connect your workers and devices to a fast, safe, and reliable network. It’s easy to manage the entire network from a single dashboard.

Access the latest technology

One of the best kept secrets about the cloud is that it gives you access to technology that used to be out of reach. For example, by setting up a cloud-based IT infrastructure, a small business can benefit from the same security intelligence, software testing and machine learning that powers large, complex enterprises.
