

Data Management Advisory Program (DMAP) – Invitation

The Data Management Advisory Program is a lightweight business and IT strategy program. The SHI/Commvault team will work with you to align your key business objectives, challenges, and constraints with technology recommendations to help you address both short and long term data management goals. The program is our way of investing in our valued customers by bringing deep data management experience, technical skills, and extensive knowledge of business and IT challenges to address our customers' most pressing data management challenges.

Collaboration:

Deliverables are fully customized to address your key questions. You may define the scope of a DMAP engagement to be:

- *How can I leverage the 'Cloud' for Data Management?*
- *How to I optimize my Data Management environment to meet the needs of the business?*
- *What is the best short and long term strategy to achieve the goals of my Data Management Modernization plan?*
- *How do I ensure that our mission critical applications are highly available and will scale to support our rapid growth?*
- *How do I develop a business case to gain executive approval?*

The time frame for the DMAP engagement will depend upon the scope defined by you. Typical engagements span 2-4 weeks, in duration, from Discovery to final delivery. The investment of time by you and your team is much shorter as the SHI/ Commvault team drives the effort and works with your schedule.

Next Steps:

As a next step, we propose a meeting between the SHI DMAP lead and relevant contacts within your organization to discuss how SHI can help you achieve your business and technology objectives.

Customer Outcomes:

Together we will work to develop the following deliverables as they apply to you:

- Best Practices and Recommendations
- Conceptual current and future state architecture
- High level Roadmap
- Business Case and alignment of business value with technology solutions
- Executive Summary presentation
