

PROTECT YOUR DATA, PROTECT YOUR BUSINESS.

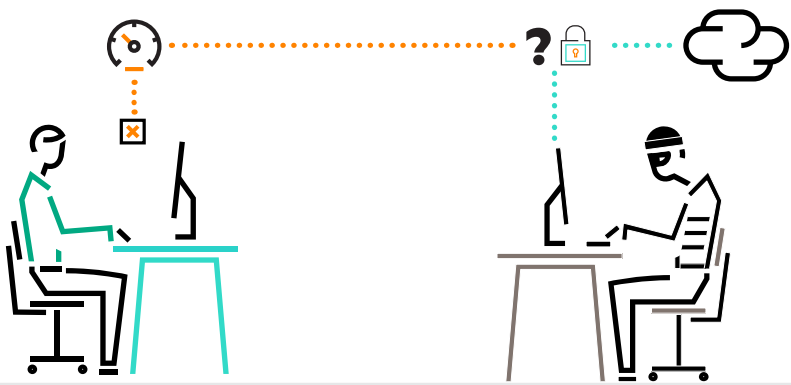

Imagine you’re running a small accounting firm. Your cloud provider just got hacked. All your data could be gone forever—or worse—stolen.

WHERE SHOULD YOU KEEP SENSITIVE DATA?

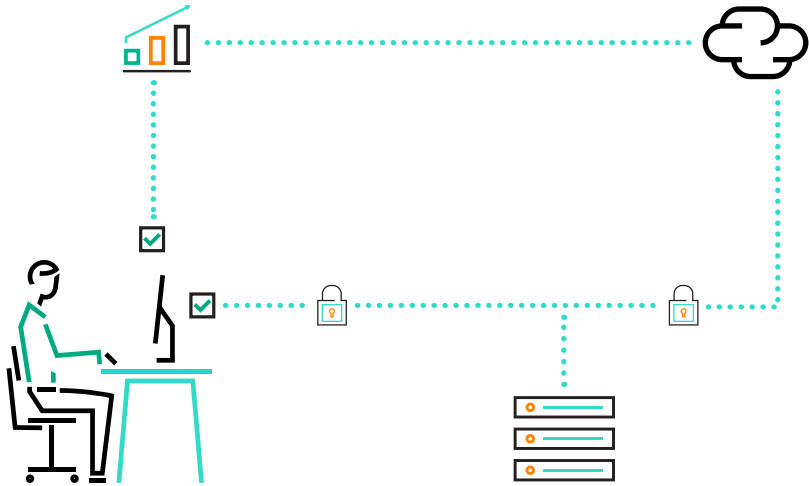

Cloud-only

Convenient, but subject to service disruptions and unknown security practices.

Cloud + on-premises

Evolving to hybrid cloud enables off-premises backup for enhanced business continuity. Store and protect data on-site with centralized storage and security, data protection, 24x7 availability. Backing up keeps your data close for prompt recovery; plus meet regulatory compliance.
