Transform provisioning and identity management

Reimagine how users authenticate to Mac

Binding to an Active Directory domain was a great solution to solve authentication issues for 20 years. But in an age of increasingly mobile devices, employees perform their jobs in a cloud-based environment without the requirement of connecting to the corporate network. Today, being a member of an Active Directory can be a challenge.

Enter Jamf Connect.

Jamf Connect relieves the binding and gives you the flexiblity to centrally and remotely manage users, groups, password, and access to corporate applications and cloud resources. It's the approach to identity and security, evolved.

Jamf Connect allows for simple provisioning of users from a cloud identity service during an Apple provisioning workflow, complete with multi-factor authentication:

ACCOUNT CREATION
Create local accounts based on Active Directory, Okta, Azure, or Ping identities and keep passwords in sync with those in the diretory service.

CLOUD MULTIFACTOR
Use supported Okta, Azure, Google Cloud, IBM Cloud, OneLogin or Ping multifactor methods at the LoginWindow.

PASSWORD SYNCHRONIZATION
Login at the LoginWindow with synchronized Okta, Azure or Ping credentials.

SMART CARDS
Customers will benefit from being able to kerberize against Active Directory using a Smart Card on the Mac.

	NoMAD	Jamf Connect
	Unleash your Macs with the power of NoMAD, a seamless way to sync accounts in environments that leverage Active Directory	With key identity provider integrations, Jamf Connect is the best way to manage accounts and authentication
