

Protect M365 Jumpstart

Powered by Cohesity

It's time to take control of your data

You've chosen Microsoft 365 (M365) to power your collaborative workspace. With so many of your users relying on this platform, you need a data protection strategy that minimizes your risk of data loss without interfering with your workflows.

As Microsoft puts it, "It's your data. You own it. You control it." That means two things: first, you have the freedom to build out a solution that's right-sized for your needs.

Second, you can't depend on Microsoft to protect your data. SHI's Protect M365 Jumpstart, powered by Cohesity Data Management as a Service (DMaaS), helps you easily and expertly design your M365 backup strategy.

Here to help

Our experts work alongside your team to design and validate your Cohesity data protection solution. We offer initial setup assistance, integration guidance, protection tests, and deploy the backup solution on time.

Ready to protect your M365 data?

Your users rely on Exchange, SharePoint, OneDrive, and Teams to get work done. With SHI's Protect M365 Jumpstart, you mitigate the risk of data loss and ensure your teams remain productive, no matter where they're located.

What's included?

Protect M365 Jumpstart is designed to modernize the way you backup and protect your M365 application data. The scope includes:

- Understanding Cohesity's DMaaS and DataProtect solutions
- Gathering inventory and requirements for protection source analysis (Exchange, SharePoint, OneDrive, Teams)
- Hosting design workshops and solution demos using SHI's Customer Innovation Center (CIC)
- Reviewing Cohesity Quick Start requirements
- Activating and configuring access to Helios tenant with Cohesity DataProtect
- Configuring pre-requisites for M365 and Cohesity integration
- Registering your M365 source (Exchange)
- Testing protection jobs of Exchange mailboxes for up to one user
- Transferring knowledge to protect other M365 application data
- Ensuring you successfully adopt your backup solution via a post-onboarding technical contact

Schedule a discovery call with SHI to begin your backup modernization journey!
