

Stop Identity-Based Threats Today

Get Started with a Complimentary Identity Security Risk Review

On-Premises

Active Directory

Did you know?

- 80% of breaches used compromised identities.¹
- 50% of organizations reported experiencing an Active Directory (AD) attack in the last two years, and 42% of those attacks were successful.²
- 75% year-over-year increase in cloud intrusions where adversaries use valid credentials to access victim's cloud environment.³

The ability to detect and stop identity-based attacks is critical. Getting visibility into the security posture of your Microsoft Entra ID and Active Directory environments is the best place to start.

What you'll get

CrowdStrike experts will provide:

Instant visibility into the identity security hygiene of Entra ID and AD environments

Deep insights into possible attack paths that adversaries can exploit and expert advice on how to address them

An understanding of how to protect your organization from modern identity-based attacks like ransomware, lateral movement, service account misuse, Pass-the-Hash, Golden Ticket and more

Get started now

1. Request a complimentary Identity Security Risk Review
2. Engage in a one-on-one session with an identity security expert
3. Identify opportunities to immediately improve your identity security posture

Are you a current CrowdStrike Falcon customer?

No deployment is required — contact your CrowdStrike account representative to get started.
