# Accelerate and Connect Every Stage of the Agreement Process with Microsoft

Many companies still prepare, sign, act on and manage customer agreements via manual, disconnected processes. The result is delays, increased rework from errors, higher costs and poor customer and employee experiences.

DocuSign eSignature for Microsoft is a suite of integrations that automates how agreements are prepared, signed, acted on and managed—all within Microsoft. Applications like Sharepoint, Word, Dynamics, Power Automate and more all work seamlessly with DocuSign eSignature allowing you to accelerate and connect every stage of the agreement process.

Prepare · Sign · Act · Manage

Benefits

Increase productivity

With DocuSign eSignature for Microsoft, your team can prepare, sign, act on and manage contracts within Microsoft, enabling them to boost productivity and accelerate the completion of agreements.

Get more value

With integrations across Microsoft 365 and Dynamics 365, DocuSign eSignature is everywhere you want it to be within the world of Microsoft applications. You can send agreements and approvals for e-signature directly from Dynamics CRM 365. Or easily prepare and send documents for e-signature leveraging Microsoft applications like Word, SharePoint or Outlook. Or, leverage the Power Automate integration so you can streamline processes between DocuSign eSignature and your Microsoft applications. Additionally, Microsoft Teams works seamlessly with these existing integrations to drive additional productivity.

Manage compliance

DocuSign eSignature includes an electronic record that serves as an audit trail and proof of the transaction. It also helps you meet some of the most stringent security standards, and uses the strongest data encryption technologies available.
