

Introducing a First-of-its-Kind SASE Expansion Bundle for Fortinet SD-WAN Customers

What is it?

A first-of-its-kind SASE expansion bundle for Fortinet SD-WAN customers. This exclusive bundle includes user license anywhere from 10, 50, or 100 seats—so organizations can try SASE at their own pace before scaling. Plus, with the Secure Private Access (SPA) connector included, users gain fast, secure access to private applications with enterprise-grade resilience.

Why the bundle?

Unified SASE is on track to become a \$29B market by 2030—and the opportunity is massive. Tens of thousands of organizations have already deployed Fortinet Secure SD-WAN. Now, the majority of them are looking for a way to extend that same secure, high-performance network experience to their remote and hybrid workforce. That's where FortiSASE steps in. With our global distributed Points of Presence (PoPs), FortiSASE delivers cloud-based security that ensures fast, resilient, and secure access—no matter where users are located.

To make adoption simple, low-risk, and easy to test, Fortinet is introducing a SASE Expansion Bundle for SD-WAN customers. This is the industry's first offer of its kind—and a powerful way to accelerate your SASE adoption journey.
