

# Google Agentspace

The search and AI Agent hub built for your work

Cutting edge-technology has added to the complexity of already fragmented systems

What if you could easily apply AI, chat, and agents across your enterprise from a **single platform**?

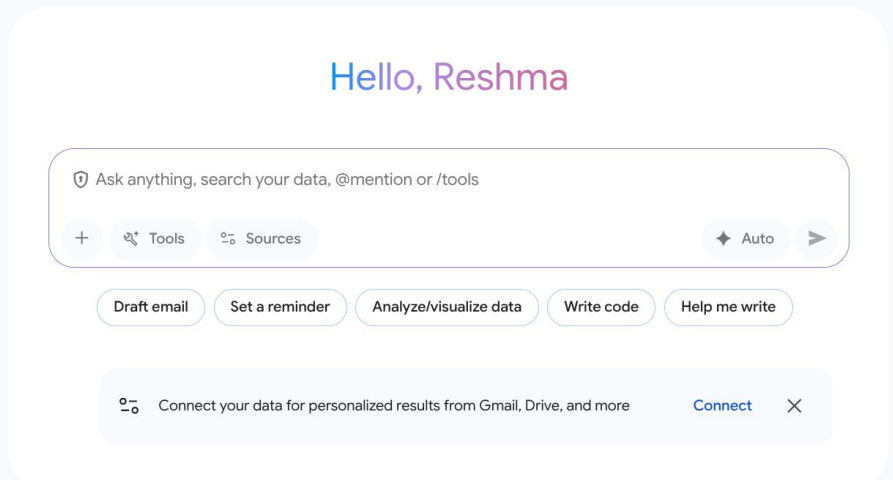

\*Please note that these figures are based on an AI value model and do not represent actual customer results.

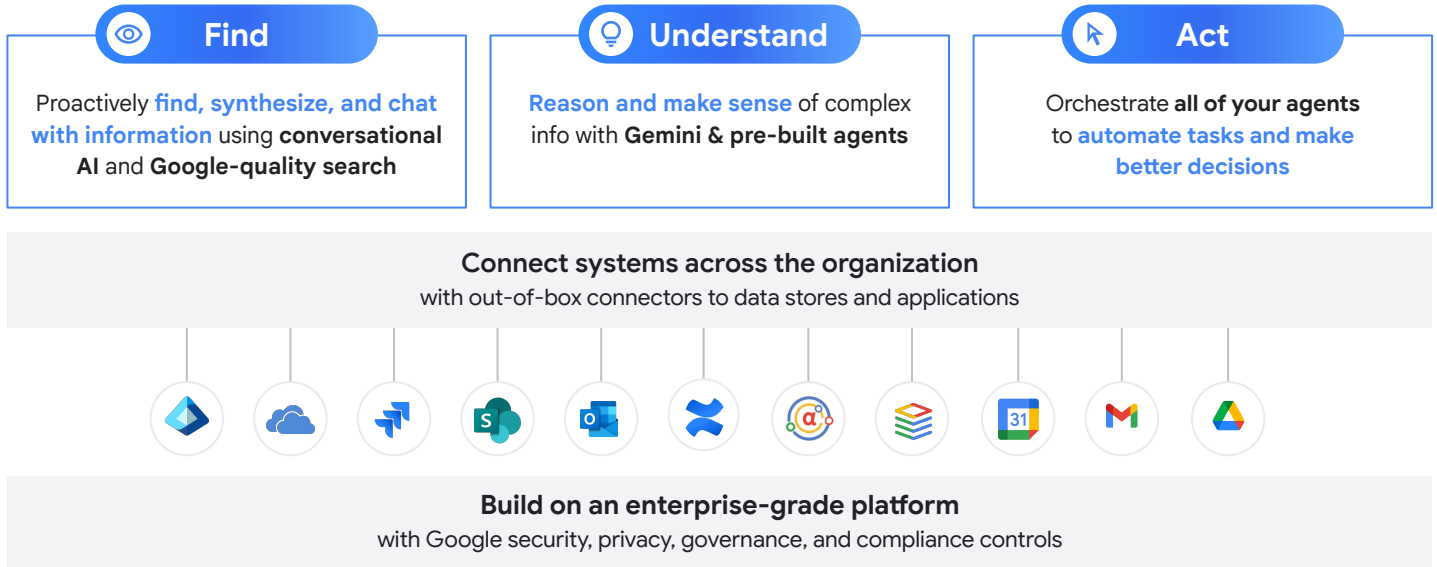

## Google Agentspace

changes how work gets done by seamlessly applying search, chat, & agents across your data

# Google Agentspace brings a single platform to build, manage and adopt AI Agents at scale

## Google Agentspace delivers exponential value over time

### Day 1: Immediate value

- Personalized, chat-based experience
- Unlock insights from documents
- Create and understand rich media
- Leverage Google-expert agents

### Early weeks: Custom agents

- Securely build & govern agents
- Scale agents with confidence
- Find answers across enterprise data
- Connect to your work apps

### Ongoing: Advanced agents at scale

- Integrate into daily tools & workflows
- Orchestrate multiple agents for complex tasks
- Create new revenue with AI
- Personalized AI Agents for all

## Google Agentspace enhancements

### Streamlined UI & strengthened experience:

Central search bar for quick access. New features: document uploads for analysis and an admin onboarding dashboard

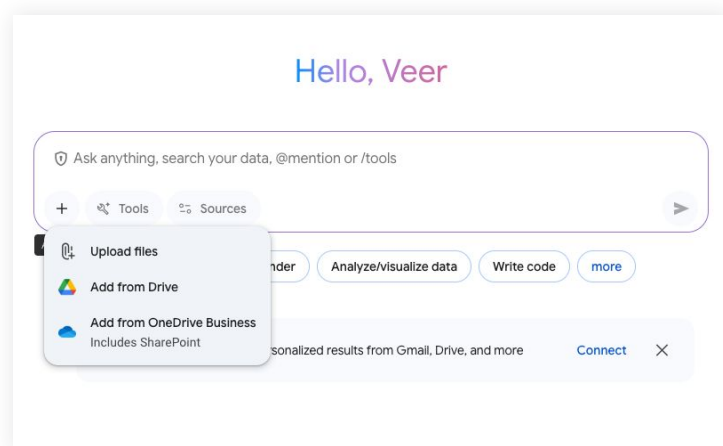

**Flexible data source management:** Users control data sources for answers and filters, and can upload various files (XLS, DOCX, PDF) for summarization and analysis

**Upgraded Deep Research agent:** 40% more comprehensive reports with deeper, richer insights and a better balance of internal/external sources

**Smarter Idea Generation agent:** Now powered by Gemini 2.5 Pro for significantly more novel ideas, with the ability to export ideas directly to a notebook

# Connect your entire knowledge base, instantly

Stop switching between tabs and start getting complete answers. Google Agentspace now securely connects to the enterprise applications your teams live in every day, breaking down information silos for good. Example use cases:

## Automated RFP and proposal generation

Review the last five successful proposals for clients in the finance industry stored in the 'Proposals' shared Drive. Using the new RFP document from Acme Corp, draft a preliminary proposal that highlights our security and compliance features.

## Intelligent meeting and action item management

Based on the transcript of my last call, identify the key action items. Assign the design tasks to Sarah via email and schedule a 30-minute follow-up meeting with the engineering lead for Thursday to review the technical specs.

## Unified sales and legal enablement

Find the latest master services agreement (MSA) template on the legal team's SharePoint site. Then, find my most recent pricing quote for 'ABC Corp' in my personal OneDrive. Summarize the key differences in payment terms between the two documents.

## Automated incident triage and reporting

When a new Jira ticket is created with 'Priority=Highest' and the label 'production-outage,' immediately summarize the issue and notify the on-call engineer via email. Then, create a weekly digest of all closed high-priority tickets and their resolutions.

## On-demand knowledge synthesis for onboarding

A new employee or their manager can directly ask Agentspace to 'Summarize our company's security policies and best practices for remote work from Confluence,' allowing immediate access to critical information without waiting for a formal onboarding session or relying on an external system to trigger the information delivery.

## Streamlined employee self-service

My VPN access isn't working on my new laptop. Find the relevant self-help article in the ServiceNow knowledge base. If that doesn't work, open a high-priority IT support ticket on my behalf and include the device logs from today.

quantiphi

The unique ability to personalize search, provide AI assistance, and leverage innovations like NotebookLM will revolutionize how knowledge workers discover, generate, and utilize information.

Gordon  
FOOD SERVICE

Employees are benefitting from easier access because they can search across multiple systems in one place, which translates to better decision-making, and less legwork to discover info.

## Get started today

- 01 Engage with your Google POC to identify the most impactful use case for your line of business
- 02 Create a pilot working with Google Cloud Consulting or your preferred partner
- 03 Evaluate results & optimize further
