

# Now is the time to get your data AI-ready

**At the heart of AI is the data that fuels your organization.** Whether you're using off-the-shelf AI models or you're further along in your AI journey, it's important to create a data foundation that will give your AI model the results you can trust. Your data also needs to be prepared, stored, managed and accessible across hybrid cloud helping you as you aim to accelerate innovation, create new revenue models, and enhance productivity. As you prepare to fully leverage the vast potential of AI, start by making your data AI-ready.

Store, prepare, and manage your data for AI applications

Access, manage, and organize large hybrid data sets across diverse locations and formats for successful deployments

Maintain data consistency

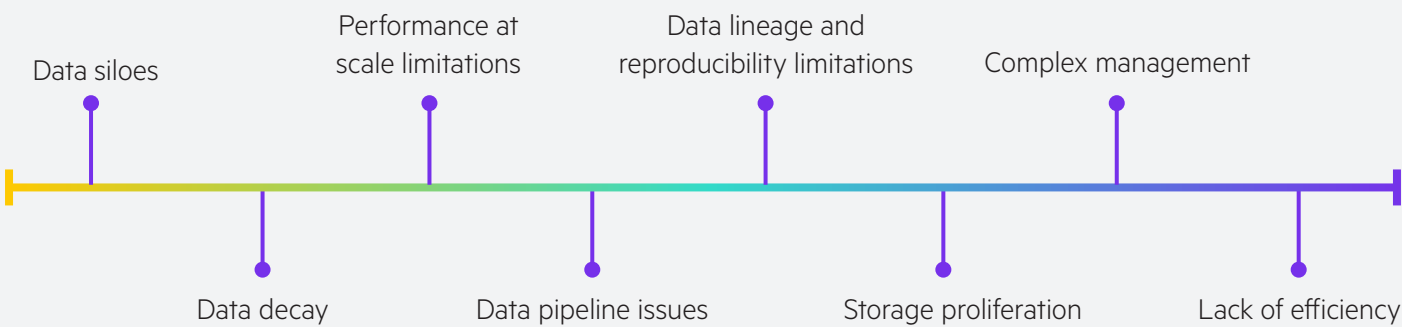

Having data that's AI-ready means you'll be able to:

Meet the performance, scale, and availability challenges of data-intensive AI workloads

Automate data pipelines

Process any type of structured and unstructured data to build better models

## Don't get held back by data challenges and complexities

## HPE can help you make your data AI-ready, as you create your AI advantage

Prepare, store, access, and manage your data with the right performance, simplicity, and scale to adjust to the new demands AI places on your organization. As part of your AI approach, HPE can help you:

Build your data foundation for AI

with a data fabric, and tackle the complex data landscape of hybrid cloud as you access, analyze, manage, and govern data seamlessly at any location

Automate and scale complex data pipelines for ML models

with a data pipelining and versioning solution as you process all structured and unstructured data types to build better models, without the hassle of rewriting codes

Meet the performance challenges of data-intensive AI workloads

with HPE's high-performance scale-out storage and simplify data management to transform faster with an intuitive cloud operating experience

## Better together

See how SHI and HPE can help you build your data foundation for AI.
