

The Standard in Apple Device Management

Maximize user productivity with powerful workflows for Mac, iPad, iPhone and AppleTV.

As Apple device adoption continues to grow in organizations around the globe, the need for an enterprise Apple management solution has never been greater.

Jamf Pro — the standard for Apple management — is an industry-leading solution that delivers the best and most secure end user experience for Mac, iPad, iPhone and AppleTV.

Empower those who choose Apple to be their best

Jamf Pro is 100% focused on Apple management and leverages native Apple technology to preserve the experience end users know and love. Staying in lockstep with Apple releases allows Jamf to deliver reliable, same-day operating system compatibility — meaning you and your end users get immediate access to new productivity and management features to stay ahead of the curve.

“SAP chose Jamf because of its focus on the user experience. Jamf Pro combined with the Apple@SAP service ensures a consistent experience for our Apple users.”

— Martin Lang, Vice President,
IT Services Enterprise Mobility, SAP

User productivity. Maximized.

Deployment

Delight your end users with a fully-customizable onboarding experience, without IT ever having to touch the device. Provision the perfect Mac, iPhone, iPad or Apple TV with hands-free, zero-touch deployment and also support secure BYOD programs for your users.

Device Management

Use configuration profiles, policies, and scripts to make your Apple devices function exactly as needed. Move beyond simple troubleshooting by automating management with our patented Smart Groups technology: a powerful way to trigger real-time alerts and actions from inventory data.

App Management

Automate and secure your app environment. Jamf Pro integrates with Apple Business Manager and Apple School Manager, so you can effortlessly assign apps to users or devices. The Jamf App Catalog supports the most common third party apps, plus Mac-ready App Installers automates the entire app lifecycle – giving time back to the IT team.

Inventory

Automatically collect user, hardware, software and security device data or customize inventory specifications. Dynamic Smart Groups keep track of everything for you, including software versions and warranty expiration.

Self Service

Give your users access to a one-stop shop for trusted apps, company resources ... and even shortcuts for troubleshooting tasks like password resets. Jamf Self Service — a fully customizable, on-demand app store that you control — is the best way to empower end users while cutting down on IT support requests.

Security

Secure Apple devices by leveraging native security features. Manage device settings and configurations, restrict malicious software and patch all of your Apple devices without user interaction. For endpoint protection purpose-built for Mac, use Jamf Pro with [Jamf Protect](#).

The best part? **Jamf Pro** works seamlessly with your existing IT services and technologies.

Deep integrations with Microsoft, Google, Cisco and more help you extend the value of your existing tech stack.
