Meeting the challenges of the entire organization

IT teams often have a separate focus than security teams when it comes to technology, but both have challenges that need to be solved. Finding solutions to meet the goals of both can sometimes feel like a pipe dream.

Use all that Apple has to offer.

Jamf is a one stop-shop of solutions to manage and secure your entire fleet and deliver the Apple experience users want. The **Jamf Business plan** bundles **Jamf Pro**, **Jamf Connect** and **Jamf Protect** to provide complete management and security at one flat rate per user.

With the Jamf Business plan, you can:

- Automate deployment and configuration of macOS, iOS, iPadOS and tvOS devices
- Secure access to devices and corporate resources with a cloud-based identity
- Monitor endpoint security and compliance
- Prevent cyber attacks with behavior threat detection
- Protect devices and users from risky apps and network connection monitoring
- Benefit from user-based licensing with a 5:1 device-to-user ratio for both corporate-owned and BYOD devices

Tap into a better solution

Simply purchasing Apple is a good start, but it's what organizations do with their devices that makes the difference.

Mobile Device Management (MDM)

Automate and scale ongoing device management and security tasks

Endpoint protection

Purpose-built for Apple, protect devices from threats to keep organization and personal data safe

Identity and access management

Provide users with a seamless log-in experience from onboarding to access with one set of cloud identity credentials

Threat prevention and remediation

Prevent cyber threats such as phishing attacks that can put organizational or personal data at risk

Zero-touch deployment

Deploy personalized devices to users anywhere, without touching the device

Inventory management

Collect user, hardware, software and device security data to understand the health of your entire environment

App management

Increase end user productivity with automated workflows to update and deploy apps

Self Service

A curated, on-demand user catalog of approved apps, settings, and resources

Zero Trust Network Access (ZTNA)

Secure access to business resources and applications

Security visibility and compliance

Validate that devices meet specific compliance requirements and react immediately if anything deviates from baseline

Manage and Secure Apple at Work

We believe it's technology's job to enable user productivity and creativity. To empower organizations to keep devices safe and protected. To simplify work.
