

# Jamf on the AWS Marketplace

## AWS Marketplace Overview

AWS Marketplace is a digital storefront containing thousands of third-party software solutions.

Jamf has a strong collaboration with AWS, involving co-selling, Marketplace listings and integrations that broaden our range of use cases and help organizations succeed with Apple.

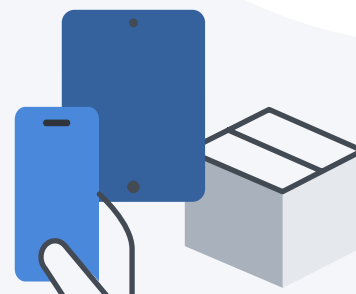

Use your AWS committed spend toward Jamf products on the AWS Marketplace.

## Why AWS Marketplace

**Consolidate Vendors** – Looking for simplicity? AWS Marketplace simplifies vendor management. With a marketplace of thousands of third-party solutions, customers can buy a variety of solutions through a single vendor: AWS. One vendor — thousands of possibilities.

**Accelerate Purchasing** – AWS Marketplace offers click-to-buy for Jamf Pro, Jamf Connect and Jamf Protect. This removes the barriers of purchase orders, invoicing and red-lines.

**Expand Budgets** – Customers with committed spend contracts with AWS can use that budget on Jamf purchases via AWS Marketplace. You can use your committed spend to unlock additional budget with AWS Marketplace.

**Visibility** – Receive status updates on the offer, know when the buyer receives and accepts the Jamf offer and share these updates with any internal or external contact. Procurement, IT or other interested parties will know when the offer status changes.

**Flexibility** – Beyond a la carte purchases of our products, you can gain the power of Jamf's solutions with the Jamf Business or Enterprise plan — the best, most affordable way to manage and secure Apple at work. [Find the best plan for your organization.](#)

*“We are pleased to be partnering with AWS yet again, this time through their Marketplace where we’re joining a global community of trusted partner solutions. Through our continued partnership with AWS, we are able to offer an Apple device management platform, security, threat prevention and custom workflows like our recently announced collaboration on EC2 Mac management to address AWS customers’ specific business needs.”*

**– Josh Jagdfeld, Senior Director, Technical Partnerships and Alliances at Jamf.**
