

As an industry leader in recycled material innovation,

we're proud to show you what we're made of.

Post-consumer recycled content (PCC)

We've used more than 110 million pounds of net recycled plastic — like water bottles and other used consumer products — in the manufacturing and packaging of our laptops, desktops, workstations, and accessories.

By 2025, 100% of our PC products will contain post-consumer recycled content.¹

X1 Carbon 7th Generation

Meet the first Lenovo laptop to be made with closed-loop post-consumer recycled content.

ThinkPad® X1 Carbon

Closed-loop PCC

We source recycled content from end-of-life IT and electronics equipment.

Since 2018, we've used more than 12 million pounds of closed-loop PCC in 66 different Lenovo products.

Sustainable components

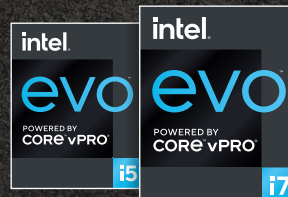

Lenovo ThinkPad® products are made with post-consumer recycled content. And they feature the Intel® Evo™ platform, powered by Intel® Core™ vPro® processors that use 100% conflict-free minerals.

Sustainable accessories

Our new PC adapter is made with an industry-leading 90% PCC. We collaborated with Sony Semiconductor Solutions Corporation on this project to prove that PCC plastics can be upcycled and used at high percentages — even in electronics with demanding technical specifications.
