Lenovo ThinkEdge SE450 Edge Server

Product Guide

The Lenovo ThinkEdge SE450 is a single-socket server, with a 2U height and short depth case that can go almost anywhere. It can be mounted on a wall, placed on the floor like a tower server, or mounted in a rack. This rugged edge server can handle continuous operating temperatures from 5°C and 45°C; and some configurations are designed to meet NEBS Level-3 and ETSI requirements for 96 hours operating excursions from -5°C and 55°C as well as tolerance to locations with high-dust and vibration.

The ThinkEdge SE450 is based on the 3rd Gen Intel Xeon Scalable processor and is designed to virtualize traditional IT applications as well as new transformative AI systems, providing the processing power, storage, accelerator, and networking technologies required for today’s edge workloads. Lenovo’s innovation makes the ThinkEdge SE450 one of the most powerful, yet quiet servers on the market, allowing it to be deployed next to end users without disturbing the workplace.

Figure 1. Lenovo ThinkEdge SE450

Did you know?

Customers with remote locations have had to make a choice between underpowered IOT gateways and PCs, or overpowered and non-rugged data center servers. With the SE450, now they have an option: a compact edge server designed specifically to meet the needs of remote locations with the processing power to run AI workloads.
Key features

The ThinkEdge SE450 is a purpose-built server that is significantly shorter than a traditional server, making it ideal for deployment in tight spaces. It can be mounted on a wall, placed vertically in a floor stand, or mounted in a rack.

The ThinkEdge SE450 puts increased processing power, storage and network closer to where data is generated, allowing actions resulting from the analysis of that data to take place more quickly. The server is designed for Wi-Fi connectivity and support is planned later in 2022.

Since these edge servers are typically deployed outside of secure data centers, they include technology that encrypts the data stored on the device if it is tampered with, only enabling authorized users to access it.

Scalability and performance

The SE450 offers numerous features to boost performance, improve scalability and reduce costs:

- Support a single processor from the powerful Intel Xeon Scalable "Ice Lake" processor family.
  - Up to 36 cores
  - Core speeds of up to 3.0 GHz
  - TDP ratings of up to 205W
- Support for up to 8 TruDDR4 memory DIMMs an up to 1 TB of memory using 128 GB DIMMs
- DIMMs operate at up to 3200 MHz means you have the fastest available memory subsystem
- Supports the new Intel Optane Persistent Memory 200 Series for advanced in-memory database applications, dense-virtualization; up to 4 PMem Modules can be installed in conjunction with regular system memory.
- Supports up to four single-width GPUs or two double-wide GPUs, for substantial processing power in an edge system.
- Supports up to four Intel ACC100 or N3000 Accelerator adapters to maximize the performance Network Function Virtualization (NFV) applications.
- Offers a choice of internal drive SSD bays supporting SATA or NVMe drives, or hot-swap front-accessible drive bays supporting SATA or NVMe drives. Support for SAS drives are planned.
- Supports M.2 drives for convenient operating system boot functions. Available M.2 adapters support either one M.2 drive or two M.2 drives in a RAID 1 configuration for performance and reliability.
- Supports 4x NVMe drives without oversubscription of PCIe lanes (1:1 connectivity). The use of NVMe drives maximizes drive I/O performance, in terms of throughput and latency.
- The server offers up to four PCIe 4.0 slots plus a slot dedicated to the OCP adapter.
- Support for up to four network adapters, up to 100 Gb Ethernet or HDR100 InfiniBand, for high-speed networking to back-end servers.

Availability and serviceability

The SE450 provides many features to simplify serviceability and increase system uptime:

- The server offers Single Device Data Correction (SDDC, also known as Chipkill), Adaptive Double-Device Data Correction (ADDDC, also known as Redundant Bit Steering or RBS), and memory mirroring for redundancy in the event of a non-correctable memory failure.
- The server offers hot-swap drives, supporting software RAID redundancy for data protection and greater system uptime.
- Available M.2 RAID Boot Adapters support RAID-1 which can enable two M.2 drives to be configured as a redundant pair.
- The server has up to two hot-swap redundant power supplies and up to six simple-swap N+1 redundant fans to provide availability for business-critical applications.
- Solid-state drives (SSDs) offer more reliability and performance than traditional mechanical HDDs for
greater uptime.

- Proactive Platform Alerts (including PFA and SMART alerts): Processors, voltage regulators, memory, internal storage (HDDs and SSDs, M.2 storage), fans, power supplies, RAID controllers, server ambient and subcomponent temperatures. Alerts can be surfaced through the XClarity Controller to managers such as Lenovo XClarity Administrator, VMware vCenter, and Microsoft System Center. These proactive alerts let you take appropriate actions in advance of possible failure, thereby increasing server uptime and application availability.

- The built-in XClarity Controller continuously monitors system parameters, triggers alerts, and performs recovery actions in case of failures to minimize downtime.

- Built-in diagnostics in UEFI, using Lenovo XClarity Provisioning Manager, speed up troubleshooting tasks to reduce service time.

- Lenovo XClarity Provisioning Manager supports diagnostics and can save service data to a USB key drive or remote CIFS share folder for troubleshooting and reduce service time.

- Auto restart in the event of a momentary loss of AC power (based on power policy setting in the XClarity Controller service processor)

- Offers a diagnostics port on the front of the server to allow you to attach an external diagnostics handset for enhanced systems management capabilities.

- Support for the XClarity Administrator Mobile app running on a supported smartphone or tablet and connected to the server through the service-enabled USB port, enables additional local systems management functions.

- Three-year or one-year customer-replaceable unit and onsite limited warranty (varies by geography), 9 x 5 next business day. Optional service upgrades are available.

**Manageability and security**

Systems management features simplify local and remote management of the SE450:

- The server includes an XClarity Controller (XCC) to monitor server availability. Optional upgrade to XCC Advanced to provide remote control (keyboard video mouse) functions. Optional upgrade to XCC Enterprise enables the additional support for the mounting of remote media files (ISO and IMG image files), boot capture, and power capping.

- Lenovo XClarity Administrator offers comprehensive hardware management tools that help to increase uptime, reduce costs and improve productivity through advanced server management capabilities.

- UEFI-based Lenovo XClarity Provisioning Manager, accessible from F1 during boot, provides system inventory information, graphical UEFI Setup, platform update function, RAID Setup wizard, operating system installation function, and diagnostic functions.

- Support for Lenovo XClarity Energy Manager, which captures real-time power and temperature data from the server and provides automated controls to lower energy costs.

- An integrated industry-standard Unified Extensible Firmware Interface (UEFI) enables improved setup, configuration, and updates, and simplifies error handling.

- Support for industry standard management protocols, IPMI 2.0, SNMP 3.0, Redfish REST API, serial console via IPMI

- An integrated hardware Trusted Platform Module (TPM) supporting TPM 2.0 enables advanced cryptographic functionality, such as digital signatures and remote attestation.

- Administrator and power-on passwords help protect from unauthorized access to the server.

- Supports Secure Boot to ensure only a digitally signed operating system can be used. Supported with HDDs and SSDs, as well as M.2 drives.

- Industry-standard Advanced Encryption Standard (AES) NI support for faster, stronger encryption.
- Intel Execute Disable Bit functionality can prevent certain classes of malicious buffer overflow attacks when combined with a supported operating system.
- Intel Trusted Execution Technology provides enhanced security through hardware-based resistance to malicious software attacks, allowing an application to run in its own isolated space, protected from all other software running on a system.
- Additional physical security features are an available chassis intrusion switch and available lockable front bezel and top cover.

**Energy efficiency**

The SE450 offers the following energy-efficiency features to save energy, reduce operational costs, and increase energy availability:

- Energy-efficient system board components help lower operational costs.
- High-efficiency power supplies with 80 PLUS Platinum and Titanium certifications
- Solid-state drives (SSDs) consume as much as 80% less power than traditional spinning 2.5-inch HDDs.
- Optional Lenovo XClarity Energy Manager provides advanced data center power notification, analysis, and policy-based management to help achieve lower heat output and reduced cooling needs.

**Components and connectors**

The following figure shows the front view of the ThinkEdge SE450 server.

![Front view of the ThinkEdge SE450](Figure 2. Front view of the ThinkEdge SE450)
The following figure shows the rear of the SE450 server.

Figure 3. Rear view of the ThinkEdge SE450

The SE450 optionally supports a security bezel which helps restrict physical access to the front of the server while still allowing cables to be properly routed through side panels. The bezel also duplicates the system LEDs that would otherwise be covered up by the bezel. The following figure shows the server with the security bezel attached.

Figure 4. View of the ThinkEdge SE450 with security bezel attached

The following figure shows the locations of key components inside the server. The two riser cards and various brackets have been removed to show the components on the system board.
Figure 5. Internal view of the ThinkEdge SE450
System architecture

The following figure shows the architectural block diagram of the SE450 system, showing the major components and connections.

The processor offers 64 PCIe G4 lanes to devices and the SE450 presents those as a combination of PCIe slots, an OCP slot, and NVMe drives. As shown in the figure, PCIe lanes to slots 3 and 6 can instead be configured to be used with the OCP slot and/or NVMe drive connections. The specific combinations supported are listed in the Configurations section.

Tip: The wrench icons show where the local and remote management functions are enabled.

Figure 6. SE450 architectural block diagram
## Standard specifications

The following table lists the standard specifications of the SE450.

### Table 1. Standard specifications

Limited warranty
Three-year customer-replaceable unit and onsite limited warranty with 9x5 next business day (NBD).

Service and support
Optional service upgrades are available through Lenovo Services: 4-hour or 2-hour response time, 6-hour fix time, 1-year or 2-year warranty extension, software support for Lenovo hardware and some third-party applications.

Dimensions
300mm chassis: Width: 445 mm (17.5 in.), height: 87 mm (3.4 in.), depth: 323 mm (12.7 in.)
360mm chassis: Width: 445 mm (17.5 in.), height: 87 mm (3.4 in.), depth: 383 mm (15.1 in.)
See Physical and electrical specifications for details.

Volume
300mm chassis: 11.6 liters
360mm chassis: 13.9 liters

Weight
300mm chassis: 14.8 kg (32.7 lb)
360mm chassis: 17.4 kg (38.4 lb)

Models
ThinkEdge SE450 models can be configured by using the Lenovo Data Center Solution Configurator (DCSC).

Configure-to-order (CTO) models are used to create models with factory-integrated server customizations. For CTO models, two base CTO models are available for the SE450 as listed in the following table, CTO1WW and CTOLWW:

- The CTO1WW base CTO model is for general business and is selectable by choosing General Purpose mode in DCSC.
- The CTOLWW base model is intended for High Performance Computing (HPC) and Artificial Intelligence (AI) configurations and solutions, including configurations for Lenovo Scalable Infrastructure (LeSI), and is enabled using either the HPC & AI LeSI Solutions mode or HPC & AI Hardware mode in DCSC. CTOLWW configurations can also be built using System x and Cluster Solutions Configurator (x-config).

Preconfigured server models may also be available for the SE450, however these are region-specific; that is, each region may define their own server models, and not all server models are available in every region.

The following table lists the base CTO models of the ThinkEdge SE450 server.

Table 2. Base CTO models

<table>
<thead>
<tr>
<th>Description</th>
<th>Machine Type/Model General purpose</th>
<th>Machine Type/Model for HPC and AI</th>
</tr>
</thead>
<tbody>
<tr>
<td>ThinkEdge SE450 - 3 year Warranty</td>
<td>7D8TCTO1WW</td>
<td>7D8TCTOLWW</td>
</tr>
</tbody>
</table>

Models of the SE450 are defined based on the depth of the chassis:
- 300mm depth chassis - supports half-length adapters only
- 360mm depth chassis - supports full-length adapters or half-length adapters

The feature codes for these chassis choices are as listed in the following table.

Table 3. Chassis base feature codes

Configurations

As shown in the System architecture section, PCIe lanes to slots 3 and 6 can instead be configured to be used with the OCP slot and/or NVMe drive connections. In addition, hot-swap drive bays are mutually exclusive with Riser 2 (slots 3 and 4). As a result, only certain combinations of slots, drive bays and drive types are supported.

The following table lists the supported combinations of server.

<table>
<thead>
<tr>

<td>No support</td>
<td>2x NVMe</td>
<td>2x AnyBay</td>
<td>2x 15mm NVMe or 2x 15mm / 4x 7mm</td>
<td>No support</td>
</tr>
</tbody>
</table>

SAS drive support is planned: The SE450 is designed to support a RAID adapter or SAS HBA for the internal drives as listed in the table, however, that support is currently not available.

Serial port support: The serial port (COM port) installs in Slot 6 and is supported in any of the configurations listed that doesn't have Slot 6 enabled. The only exception to this is 360mm chassis configurations that have a double-wide GPU installed in Slot 5, since the GPU will also occupy Slot 6. For more information, see the Serial port section.

Processors

The SE450 supports a single processor in the 3rd Gen Intel Xeon Scalable processor family (formerly codenamed “Ice Lake”).
In this section:

- Processor options
- Processor features

**Processor options**

The table below lists the processors that are supported.

Some processors include a suffix letter in the processor model number:

- M: Media Processing optimized
- N: NFV optimized
- P: High frequency-optimized for IaaS virtualization customers
- Q: Optimized for liquid cooling
- S: Large (512GB) SGX Enclave size
- T: High Tcase
- U: Single socket
- V: High density/low power-optimized for SaaS virtualization customers
- Y: Speed Select

**Processor features**

Supported processors have the following features:

- Third-generation Intel Xeon Scalable processors (formerly codenamed “Ice Lake”)
- 10 nm process technology
- 8x DDR4 memory channels
- 64x PCIe 4.0 I/O lanes available for PCIe and NVMe devices
- 1.25 MB L2 cache per core
- 1.5 MB or more L3 cache per core
- Intel Deep Learning Boost, which provides built-in Artificial Intelligence (AI) acceleration with the Vector Neural Network Instruction set (VNNI). DL Boost and VNNI are designed to deliver significant, more efficient Deep Learning (Inference) acceleration for high-performance AI workloads.
- Intel Hyper-Threading Technology, which boosts performance for multithreaded applications by enabling simultaneous multithreading within each processor core, up to two threads per core.
- Intel Turbo Boost Technology 2.0, which allows processor cores to run at maximum speeds during peak workloads by temporarily going beyond processor TDP.
- Intel Virtualization Technology (includes VT-x and VT-d), which integrates hardware-level virtualization hooks that allow operating system vendors to better use the hardware for virtualization workloads.
- Intel Speed Select Technology, supported on some processor models, enables increased core Turbo Boost frequency on specific individual cores to maximize application performance.
- Intel Advanced Vector Extensions 512 (AVX-512), to enable acceleration of enterprise-class workloads, including databases and enterprise resource planning (ERP).
- Up to two Intel AVX-512 Fused-Multiply Add (FMA) units
- Intel SGX (Software Guard Extensions) and Intel TME (Total Memory Encryption) security features

The following table compares the features of the supported third-generation Intel Xeon processors.

**Abbreviations used in the table:**
- TB: Turbo Boost 2.0
- UPI: Ultra Path Interconnect
- TDP: Thermal Design Power
- SGX: Software Guard Extensions
- PMem: Persistent Memory support

* L3 cache is 1.5 MB per core or larger. Processors with a larger L3 cache per core are marked with an *
Memory options

The SE450 has 10 DIMM slots, supporting the following memory and persistent memory combinations:

- 1, 2, 4, 6 or 8x RDIMMs (no persistent memory modules)
- 6x RDIMMs and 1x persistent memory module
- 8x RDIMMs and 1x persistent memory module
- 4x RDIMMs and 4x persistent memory modules

The processor has 4 memory controllers and 8 memory channels; with all-memory configurations (that is, without persistent memory), the DIMMs are installed 1 RDIMM per channel. This corresponds to all the white DIMM slots on the system board. See the internal view of the server for the location of the DIMM slots.

Lenovo TruDDR4 RDIMMs and 3DS RDIMMs are supported. With 8x 128 GB 3DS RDIMMs installed, the SE450 supports a total of 1 TB of system memory.

The use of persistent memory is described in the Persistent Memory section.

Memory operates at up to 3200 MHz, depending on the processor selected. If the processor selected has a lower memory bus speed, then all DIMMs will operate at that lower speed. See the Processor features section for details.

Lenovo TruDDR4 memory uses the highest quality components that are sourced from Tier 1 DRAM suppliers and only memory that meets the strict requirements of Lenovo is selected. It is compatibility tested and tuned to maximize performance and reliability. From a service and support standpoint, Lenovo TruDDR4 memory automatically assumes the system warranty, and Lenovo provides service and support worldwide.

The following table lists the memory options that are available for the server.

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
<th>Maximum supported</th>
</tr>
</thead>
<tbody>
<tr>
<td>4X77A08632</td>
<td>B963</td>

<td>ThinkSystem 128GB TruDDR4 3200 MHz (2S2Rx4 1.2V) 3DS RDIMM</td>
<td>8</td>
</tr>
</tbody>
</table>

The following rules apply when selecting the memory configuration:

- In the SE450, the following DIMM quantities are supported: 1, 2, 4, 6, and 8. Other quantities are not supported.
- The server supports RDIMMs and 3DS RDIMMs; UDIMMs and LRDIMMs are not supported
- Mixing RDIMMs and 3DS RDIMMs is not supported
- Mixing x4 and x8 DIMMs is supported

For best performance, consider the following:

- Install 8 memory DIMMs so that all memory channels are used.
- Populate memory channels so they all have the same total memory capacity.
- Ensure all memory controllers on a processor socket have the same DIMM configuration.

The following memory protection technologies are supported:

- ECC
- SDDC (for x4-based memory DIMMs; look for "x4" in the DIMM description)
- ADDDC (for x4-based memory DIMMs)
- Memory mirroring

**Note:** Memory sparing is not supported

If memory channel mirroring is used, then DIMMs must be installed in pairs or sets of three (minimum of one pair or set of three), and all DIMMs in the pair or set of three must be identical in type and size. 50% of the installed capacity is available to the operating system.

### Persistent Memory

The SE450 server supports Intel Optane Persistent Memory 200 Series, a new class of memory and storage technology explicitly architected for server usage. Persistent memory is an innovative technology that delivers a unique combination of affordable large memory capacity and persistence (non-volatility). It offers significantly lower latency than fetching data from SSDs, even NVMe SSDs, and offers higher capacities than system memory.

Persistent memory technology can help boost the performance of data-intensive applications such as in-memory analytics, databases, content delivery networks, and high performance computing (HPC), as well as deliver consistent service levels at scale with higher virtual machine and container density. When data is stored closer to the processor on nonvolatile media, applications can see significant overall improvement in performance.

The following table lists the ordering information for the supported persistent memory modules.

**Table 8. Persistent memory module part numbers**

</table>

App Direct Mode and Memory Mode are supported. Mixed Mode is not supported.

The following table lists the supported combinations of memory (RDIMMs) and PMem in App Direct mode. The supported RDIMMs to PMem ratio must be between 1:1 and 1:8.
### Table 9. Supported combinations in App Direct mode

<table>

</tr>
</tbody>
</table>

* In App Direct Mode, the available memory is the sum of the installed RDIMMs + PMem. The actual user capacity of PMem modules is less than the stated amount. For example, a 128GB PMem module has 126.7GB usable storage.
† Density ratio of system memory to persistent memory, RDIMM:PMem; 2-Socket-capable third-generation Intel Xeon Scalable processors only support RDIMM:PMem density ratios of between 1:1 and 1:8

The following table lists the supported combinations of RDIMMs and PMem in Memory mode. The supported RDIMMs to PMem ratio must be between 1:4 and 1:16.

### Table 10. Supported combinations in Memory Mode

<table>
<thead>
<tr>
<th>Total RDIMMs</th>
<th>Total PMem</th>
<th>Total Available Memory*</th>
<th>Ratio (RDIMM: PMem)†</th>
<th>Quantity of RDIMMs</th>
<th>Quantity of PMem modules</th>

<td>4</td>
</tr>
<tr>
<td>256 GB</td>
<td>1 TB</td>
<td>1 TB</td>
<td>1:4</td>
<td>4</td>
<td>4</td>
</tr>
</tbody>
</table>

* In Memory Mode, the available memory = persistent memory installed. The actual user capacity of PMem modules is less than the stated amount. For example, a 128GB PMem module has 126.7GB usable storage.
† Ratio of system memory to persistent memory, RDIMM:PMem; Memory Mode only supports DIMM:PMem ratios of between 1:4 and 1:16

Persistent memory requirements:
- Some processors do not support PMem. See the Processor features section for details.
- App Direct Mode and Memory Mode are supported, however Mixed Mode is not supported.
Only quantities of 1x or 4x PMem modules are supported as listed in the above tables. Other quantities are not supported.

PMem modules operate at up to 3200 MHz, however if the processor selected has a lower memory bus speed, then PMem modules will operate at that lower speed.

All installed PMem modules must be the same size. Mixing PMem modules of different capacities is not supported.

Both interleaved and non-interleaved modes are supported.

Memory mirroring is not supported with PMem modules installed.

For additional details, see the Intel Optane Persistent Memory 200 Series product guide, https://lenovopress.com/LP1380.

Internal storage

The SE450 offers the following internal storage options:

- Up to 4x internal SSD drive bays supporting non-hot-swap trayless NVMe or SATA SSD drives
- Up to 2x 2.5-inch hot-swap drive bays, front accessible, supporting SATA SSD drives (mutually exclusive with slots 3 and 4 in Riser 2)
- Up to 2x M.2 drives for boot functions, supporting SATA drives

In this section:

- Internal drive cage
- Hot-swap drive bays
- Supported drive bay combinations
- M.2 drives

Internal drive cage

The SE450 supports an internal drive cage which supports either of the following:

- Up to 4x 7mm trayless drives, either SATA or NVMe
- Up to 2x 15mm trayless drives, either SATA or NVMe

The internal drive cage is mounted at the front of the processor and DIMMs as shown in the following figure.

![Internal drive cage for 4x 7mm or 2x 15mm drives](image)

Figure 7. Location of the internal drive cage

The drive cage is only available in preconfigured models or CTO. Field upgrades are not available.
Table 11. Internal drive cage

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTO only</td>
<td>BMGT</td>
<td>ThinkEdge SE450 Internal HDD Cage</td>
</tr>
</tbody>
</table>

**Hot-swap drive bays**

The SE450 supports 2x 2.5-inch hot-swap drive bays, mounted in place of Riser 2.

![Hot-swap drive bays](image)

**Figure 8. Location of the hot-swap drive bays**

The drive cage is only available in preconfigured models or CTO. Field upgrades are not available.

Table 12. Hot-swap drive bays

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTO only</td>
<td>BMGN</td>
<td>ThinkEdge SE450 Front HDD Cage (includes 2-drive AnyBay backplane)</td>
</tr>
</tbody>
</table>

Configuration requirements:

- The hot-swap drive bays support 2.5-inch hot-swap drives, either SATA, NVMe or SAS. SAS drives are planned for support at a later date and will require the use of a RAID adapter or SAS HBA.
- The hot-swap drive bays are mutually exclusive with Riser 2 (slots 3 and 4)
- The server supports a maximum of 4x NVMe drives, so if two NVMe drives are configured as hot-swap drives, then only two NVMe drives can be configured in the internal drive cage (trayless drives)
- The required cables are derived by the configurator
Supported drive bay combinations

The following drive bay combinations are supported:

- Up to 4x internal SATA drives (no hot-swap drives)
- Up to 4x internal NVMe drives (no hot-swap drives)
- Up to 4x internal SATA drives + 2x hot-swap SATA drives
- Up to 4x internal SATA drives + 2x hot-swap NVMe drives
- Up to 2x internal NVMe drives + 2x hot-swap SATA drives
- Up to 2x internal NVMe drives + 2x hot-swap NVMe drives

Configurations rules:

- Zero internal (trayless) drives can be selected as long as an M.2 drive is selected
- The use of hot-swap drive bays require internal drives or M.2 drives
- Hot-swap drive bays are not available if Riser 2 is installed. NVMe drives are not supported in some adapter slot configurations. See the Configurations section for details.

M.2 drives

The SE450 supports one or two M.2 form-factor SATA drives for use as an operating system boot solution. The M.2 drives install into an M.2 module which is mounted vertically in the SE450 in a bracket attached to the power supply cage. See the internal view of the server for the location.

Table 13. M.2 bracket

<td>B5XJ</td>
<td>ThinkSystem M.2 SATA/NVMe 2-Bay Enablement Kit</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>1</td>
</tr>
</tbody>
</table>

Supported drives are listed in the Internal drive options section.

**Note:** There are currently no M.2 NVMe drives supported in the SE450, however support is planned.

The M.2 SATA/NVMe 2-Bay Enablement Kit has the following features:

- Supports one or two M.2 drives, either SATA or NVMe
- When two drives installed, they must be either both SATA or both NVMe
- Support 42mm, 60mm, 80mm and 110mm drive form factors (2242, 2260, 2280 and 22110)
- JBOD native support; no built-in RAID support (RAID can be enabled via Intel VROC)
- Either 6Gbps SATA or PCIe 3.0 x1 interface to the drives depending on the drives installed
- Supports monitoring and reporting of events and temperature through I2C
- Firmware update via Lenovo firmware update tools

For further details about M.2 components, see the ThinkSystem M.2 Drives and M.2 Adapters product guide: https://lenovopress.com/lp0769-thinksystem-m2-drives-adapters
Controllers for internal storage

The drives of the SE450 are connected to controller on the system board:

- Onboard SATA ports with software RAID support (Intel VROC SATA RAID, formerly known as Intel RSTe)
- Onboard NVMe ports with software RAID support (Intel VROC NVMe RAID)

The following table lists the adapters used for the internal storage of the server.

Table 15. Internal Storage adapter support

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onboard SATA - Intel VROC SATA RAID (Intel RSTe)</td>
<td>None</td>
<td>On Board SATA Software RAID Mode</td>
</tr>
<tr>
<td>Onboard NVMe - Intel VROC NVMe RAID</td>
<td>None</td>
<td>Intel VROC (VMD NVMe RAID) Intel SSD Only (Standard)</td>
</tr>
<tr>
<td>4L47A39164</td>
<td>B96G</td>
<td>Intel VROC (VMD NVMe RAID) Premium (license upgrade - to enable RAID support for non-Intel NVMe SSDs)</td>
</tr>
</tbody>
</table>

The onboard SATA controller has the following features:

- Controller integrated into the Intel PCH
- 6 Gbps SATA host interface
- Supports RAID-0, 1, 5, 10 (Intel VROC SATA RAID, previously known as RSTe)
- Supports JBOD

The onboard NVMe support has the following features:

- Controller integrated into the Intel processor
- Each drive has PCIe 4.0 x4 host interface
- Supports JBOD - Intel and non-Intel NVMe SSDs - no license required
- Supports RAID-0, 1, 5, 10 (Intel VROC NVMe RAID) - Intel NVMe SSDs only unless VROC Premium license is installed
- VROC Premium enabled RAID support on non-Intel drives

Intel VROC onboard SATA and NVMe RAID

Intel VROC (Virtual RAID on CPU) is a feature of the Intel processor that enables RAID support. There are two separate functions of VROC:

- Intel VROC SATA RAID, formerly known as Intel RSTe
- Intel VROC NVMe RAID

VROC SATA RAID (RSTe) is available and supported with all SATA drives. It offers a 6 Gb/s connection to each drive and on the SE450 implements RAID levels 0, 1, 5, and 10. RAID 1 is limited to 2 drives per array, and RAID 10 is limited to 4 drives per array. Hot-spare functionality is also supported.

VROC NVMe RAID offers RAID support for any NVMe drives directly connected to the ports on the server's system board. On the SE450, it implements RAID levels 0, 1, 5, and 10. RAID 1 is limited to 2 drives per array, and RAID 10 is limited to 4 drives per array. Hot-spare functionality is also supported.

By default, VROC NVMe RAID support is limited to use with only Intel-branded NVMe drives (feature B9X7). If you wish to enable RAID support for non-Intel NVMe SSDs, select the VROC Premium license using the ordering information in the following table. VROC Premium is fulfilled as a Feature on Demand (FoD) license and is activated via the XCC management processor user interface.
Table 16. VROC upgrade

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4L47A39164</td>
<td>B96G</td>
<td>Intel VROC (VMD NVMe RAID) Premium</td>
</tr>
</tbody>
</table>

VROC Premium is only needed for non-Intel NVMe drives in a RAID configuration. You do not need the VROC Premium license upgrade under any of the following conditions:

- If you have SATA drives connected to the onboard SATA ports, you do not need VROC Premium
- If you have Intel NVMe drives connected to the onboard NVMe ports, you do not need VROC Premium
- If you have non-Intel NVMe drives connected to the onboard NVMe ports, but you don’t want RAID support, you do not need VROC Premium

**Virtualization support:** Virtualization support for Intel VROC is as follows:

- **VROC SATA RAID (RSTe):** VROC SATA RAID is not supported by virtualization hypervisors such as ESXi, KVM, Xen, and Hyper-V. Virtualization is only supported on the onboard SATA ports in AHCI (non-RAID) mode.
- **VROC (VMD) NVMe RAID:** VROC (VMD) NVMe RAID is supported by ESXi, KVM, Xen, and Hyper-V. ESXi support is limited to RAID 1 only; other RAID levels are not supported. Windows and Linux OSes support VROC RAID NVMe, both for host boot functions and for guest OS function, and RAID-0, 1, 5, and 10 are supported.

**Internal drive options**

The following tables list the drive options for internal storage of the server.

2.5-inch hot-swap drives:

- 2.5-inch hot-swap 6 Gb SATA SSDs
- 2.5-inch hot-swap PCIe 4.0 NVMe SSDs

Trayless drives:

- 7mm 2.5-inch trayless 6 Gb SATA SSDs
- 7mm 2.5-inch trayless PCIe 4.0 NVMe SSDs
- 15mm 2.5-inch trayless PCIe 4.0 NVMe SSDs

**Field upgrades:** Trayless drives can only be installed in the field by trained technicians who are certified by Lenovo Service.

M.2 drives:

- M.2 SATA drives

**M.2 drive support:** The use of M.2 drives requires an additional adapter as described in the M.2 drives subsection.

**WLAN Network Module**

The SE450 is designed to offer Wi-Fi support and includes two external antennas for Wi-Fi connectivity. Once available, Wi-Fi will be enabled via an integrated Embedded Network Module (ENM) adapter in dedicated slot with external antennas. The ENM adapter will support IEEE 802.11 a/b/g/n/ac/ax WLAN using an M.2 card that connects to the ENM adapter.

**I/O expansion**

The SE450 has PCIe slots for adapters:

- Riser 1:
  - Slot 5: PCIe G4 x16
  - Slot 6: PCIe G4 x16 (PCIe x8 or not connected in some configurations)
- Riser 2:
  - Slot 3: PCIe G4 x16 (PCIe x8 or not connected in some configurations)
  - Slot 4: PCIe G4 x16
- OCP slot 7: PCIe G4 x16 (not connected in some configurations)

Specific support for these slots is listed in the Configurations section.

![Figure 9. Slot numbering](image)

Ordering information for the Risers and OCP bracket are listed in the following table. For M.2, see the M.2 drives section.

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTO only</td>
<td>BMGR</td>
<td>ThinkEdge SE450 OCP Cage</td>

</tr>
<tr>
<td>CTO only</td>
<td>BMGM</td>
<td>ThinkEdge SE450 Riser 2 (slots 3 &amp; 4)</td>
</tr>
</tbody>
</table>

As described in the Models section, there are two chassis depths available with the SE450:

- 360mm chassis: Supports all adapters
- 300mm chassis: Supports all adapters except full-length adapters like double-wide GPUs
**Serial port**

The SE450 optionally supports a RS-232 serial port by adding a COM port bracket to a PCIe slot. The bracket is only supported in slot 6. Ordering information is shown in the following table.

Table 25. Serial port

<table>
<thead>
<tr>
<th>Part number</th>

</tr>
</tbody>
</table>

The use of these adapters also requires power cables which are included in the option part numbers or are derived by the configurator for CTO orders. When two adapters are installed in the same Riser, use the included Y-cable which provides power to both adapters.

Network adapters

The server has a dedicated OCP 3.0 SFF slot with PCIe 4.0 x16 host interface. See Figure 3 for the location of the OCP slot. One port can optionally be shared with the XCC management processor for Wake-on-LAN and NC-SI support.

The following table lists the supported OCP adapters. These adapters are CTO only and not available as field upgrades.

</tr>
</tbody>
</table>

For information about the GPU, see the ThinkSystem GPU Summary, available at: https://lenovopress.com/lp0768-thinksystem-thinkagile-gpu-summary

Cooling

The SE450 server has six 60 mm dual-rotor simple-swap fans.

All six are standard and support N+1 rotor redundancy.

Power supplies

The SE450 supports one or two hot-swap power supplies, installed at the front of the server. When two are installed, they are redundant in most configurations. Ordering information is listed in the following table.

Table 31. Power options

<table>
<thead>
<tr>
<th>Part number</th>

<td></td>
</tr>
<tr>
<td>CTO only BMHA</td>
<td>ThinkEdge SE450 1100W -48V DC 4S Power Supply</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>
Configuration requirements:

- If two power supplies are installed, they must be identical.
- To determine the power supply needed for your configuration, use Lenovo Capacity Planner as described in the Capacity Planner section.
- Power supplies from other ThinkSystem servers have fans that operate in the opposite direction and are not supported.

Power cords

Line cords and rack power cables with C13 connectors can be ordered as listed in the following table.

**110V customers**: If you plan to use the 1100W power supply with a 110V power source, select a power cable that is rated above 10A. Power cables that are rated at 10A or below are not supported with 110V power.

**Systems management**

The SE450 contains an integrated service processor, XClarity Controller (XCC), which provides advanced control, monitoring, and alerting functions. The XCC is based on the Pilot4 XE401 baseboard management controller (BMC) using a dual-core ARM Cortex A9 service processor.

Topics in this section:

- Activation
- Local management
- External Diagnostics Handset
- System status with XClarity Mobile
- Remote management
- Lenovo XClarity Provisioning Manager
Activation

**Activation currently not available**: The Activation feature of the SE450 is currently not available but is planned for future support.

Activation is an planned security feature of the SE450 that ensures that the system delivered from the factory is only used by its intended recipient and that all data and applications remains secure. Once available, activation is enabled on a factory order when the Security Pack Enabled feature (feature code BLZ2) is selected.

Local management

The SE450 offers a front operator panel with key controls and status indicators, as shown in the following figure.

![Front operator panel and system LEDs](image)

**No support for 5G as a client**: The SE450 does not offer any 5G or LTE Wireless client support. The 5G network LEDs are non-operational.

The buttons on the front of the server:

- Power button
- ID (identification) button - turns on the LED housed within the button as well as passing the signal to the XCC for display remotely in XClarity Administrator
The LEDs on the front of the server are as follows:

- **ThinkShield Activation LED (green)** - indicates the state of server activation (planned for future use)
  - On - Activation process has been completed
  - Blinking - Activation is required before the server can be used
  - Off - Activation is disabled on this system

- **Power LED (green)** - indicated activation and power status, as follows:
  - Off - Server does not have power applied
  - Fast flash (4 times per second) - Either server has just had power applied and is not ready to be powered on yet, or the server has not been activated yet
  - Slow flash (once per second) - Server is ready to be powered on
  - On solid - Server is powered on

- **Ethernet network activity** - indicates when the Ethernet adapter installed in the OCP slot has activity

- **Identification LED (blue)** - lights when the button is pressed or when the function is activated remotely in XClarity Controller.

- **System error LED (yellow)**

- **5G network LED** - not used (no support for 5G or LTE as a client)

- **Wi-Fi network LED (green)** - shows the signal strength of the Wi-Fi network connection:
  - On - Good connection
  - Blinking - Device active but not connected
  - Off - Device inactive

The system LEDs are duplicated on the top of the server. The same LEDs are also duplicated on the front of the security bezel as shown in the *Security* section.

**External Diagnostics Handset**

The SE450 also has a port to connect an External Diagnostics Handset as shown in the following figure. The External Diagnostics Handset has the same functions as the Integrated Diagnostics Panel but has the advantages of not consuming space on the front of the server plus it can be shared amongst many servers in your data center. The handset has a magnet on the back of it to allow you to easily mount it on a convenient place on any rack cabinet.
Ordering information for the External Diagnostics Handset with is listed in the following table.

Field upgrade only: The External Diagnostics Handset is only available as an option for field upgrades. Not available in CTO orders.

Table 34. External Diagnostics Handset ordering information

System status with XClarity Mobile

The XClarity Mobile app includes a tethering function where you can connect your Android or iOS device to the server via USB to see the status of the server.

The steps to connect the mobile device are as follows:

1. Enable USB Management on the server, by holding down the ID button for 3 seconds (or pressing the dedicated USB management button if one is present)
2. Connect the mobile device via a USB cable to the server's USB port with the management symbol
3. In iOS or Android settings, enable Personal Hotspot or USB Tethering
4. Launch the Lenovo XClarity Mobile app

Once connected you can see the following information:

- Server status including error logs (read only, no login required)
- Server management functions (XClarity login credentials required)

Remote management

Remote server management is provided through industry-standard interfaces:

- Intelligent Platform Management Interface (IPMI) Version 2.0
- Simple Network Management Protocol (SNMP) Version 3 (no SET commands; no SNMP v1)
- Common Information Model (CIM-XML)
- Representational State Transfer (REST) support
- Redfish support (DMTF compliant)
- Web browser - HTML 5-based browser interface (Java and ActiveX not required) using a responsive design (content optimized for device being used - laptop, tablet, phone) with NLS support

Remote management is available via the following connections:

- Via the dedicated Ethernet port for management. See the Components and connectors section for the location of these ports.
- Via Port 1 of the OCP adapter (if installed), which supports NC-SI to allow sharing of the Ethernet port between the operating system and remote management.

The front of the server houses an pull-out information tab (also known as the network access tag). A label on the tab shows the network information (MAC address and other data) to remotely access the service processor. See the Components and connectors section for the location of this pull-out tab.

There are two XClarity Controller upgrades available for the server, Advanced and Enterprise.
XCC Advanced Upgrade adds the following functions:

- Remotely viewing video with graphics resolutions up to 1600x1200 at 75 Hz with up to 23 bits per pixel, regardless of the system state
- Remotely accessing the server using the keyboard and mouse from a remote client
- International keyboard mapping support
- Syslog alerting
- Redirecting serial console via SSH
- Component replacement log (Maintenance History log)
- Access restriction (IP address blocking)
- Lenovo SED security key management
- Displaying graphics for real-time and historical power usage data and temperature

XCC Enterprise Upgrade enables the following additional features:

- Boot video capture and crash video capture
- Virtual console collaboration - Ability for up to 6 remote users to be log into the remote session simultaneously
- Remote console Java client
- Mapping the ISO and image files located on the local client as virtual drives for use by the server
- Mounting the remote ISO and image files via HTTPS, SFTP, CIFS, and NFS
- Power capping
- System utilization data and graphic view
- Single sign on with Lenovo XClarity Administrator
- Update firmware from a repository
- License for XClarity Energy Manager

For configure-to-order (CTO), you can enable the required XCC functionality by selecting the appropriate XCC feature codes listed in the following table:

- XCC Standard - select neither feature listed in the table
- XCC Advanced - select feature AVUT
- XCC Enterprise - select feature AUPW

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Lenovo XClarity Provisioning Manager

Lenovo XClarity Provisioning Manager (LXPM) is a UEFI-based application embedded in ThinkSystem servers and accessible via the F1 key during system boot.

LXPM provides the following functions:
- Graphical UEFI Setup
- System inventory information and VPD update
- System firmware updates (UEFI and XCC)
- RAID setup wizard
- OS installation wizard (including unattended OS installation)
- Diagnostics functions

Lenovo XClarity Administrator

Lenovo XClarity Administrator is a centralized resource management solution designed to reduce complexity, speed response, and enhance the availability of Lenovo systems and solutions. It provides agent-free hardware management for ThinkSystem servers, in addition to ThinkServer, System x, and Flex System servers. The administration dashboard is based on HTML 5 and allows fast location of resources so tasks can be run quickly.

Because Lenovo XClarity Administrator does not require any agent software to be installed on the managed endpoints, there are no CPU cycles spent on agent execution, and no memory is used, which means that up to 1GB of RAM and 1 - 2% CPU usage is saved, compared to a typical managed system where an agent is required.

Lenovo XClarity Administrator is an optional software component for the SE450. The software can be downloaded and used at no charge to discover and monitor the SE450 and to manage firmware upgrades.

If software support is required for Lenovo XClarity Administrator, or premium features such as configuration management and operating system deployment are required, Lenovo XClarity Pro software subscription should be ordered. Lenovo XClarity Pro is licensed on a per managed system basis, that is, each managed Lenovo system requires a license.

The following table lists the geo-specific Lenovo XClarity software license options.

Lenovo XClarity Administrator offers the following standard features that are available at no charge:

- Auto-discovery and monitoring of Lenovo systems
- Firmware updates and compliance enforcement
- External alerts and notifications via SNMP traps, syslog remote logging, and e-mail
- Secure connections to managed endpoints
- NIST 800-131A or FIPS 140-2 compliant cryptographic standards between the management solution and managed endpoints
- Integration into existing higher-level management systems such as cloud automation and orchestration tools through REST APIs, providing extensive external visibility and control over hardware resources
- An intuitive, easy-to-use GUI
- Scripting with Windows PowerShell, providing command-line visibility and control over hardware resources

Lenovo XClarity Administrator offers the following premium features that require an optional Pro license:

- Pattern-based configuration management that allows to define configurations once and apply repeatedly without errors when deploying new servers or redeploying existing servers without disrupting the fabric
- Bare-metal deployment of operating systems and hypervisors to streamline infrastructure provisioning

For more information, refer to the Lenovo XClarity Administrator Product Guide: http://lenovopress.com/tips1200

**Lenovo XClarity Integrators**

Lenovo also offers software plug-in modules, Lenovo XClarity Integrators, to manage physical infrastructure from leading external virtualization management software tools including those from Microsoft and VMware.

These integrators are offered at no charge, however if software support is required, a Lenovo XClarity Pro software subscription license should be ordered.

Lenovo XClarity Integrators offer the following additional features:

- Ability to discover, manage, and monitor Lenovo server hardware from VMware vCenter or Microsoft System Center
- Deployment of firmware updates and configuration patterns to Lenovo x86 rack servers and Flex System from the virtualization management tool
- Non-disruptive server maintenance in clustered environments that reduces workload downtime by dynamically migrating workloads from affected hosts during rolling server updates or reboots
- Greater service level uptime and assurance in clustered environments during unplanned hardware events by dynamically triggering workload migration from impacted hosts when impending hardware failures are predicted

For more information about all the available Lenovo XClarity Integrators, see the Lenovo XClarity Administrator Product Guide: https://lenovopress.com/tips1200-lenovo-xclarity-administrator
Lenovo XClarity Essentials

Lenovo offers the following XClarity Essentials software tools that can help you set up, use, and maintain the server at no additional cost:

- **Lenovo Essentials OneCLI**
  OneCLI is a collection of server management tools that uses a command line interface program to manage firmware, hardware, and operating systems. It provides functions to collect full system health information (including health status), configure system settings, and update system firmware and drivers.

- **Lenovo Essentials UpdateXpress**
  The UpdateXpress tool is a standalone GUI application for firmware and device driver updates that enables you to maintain your server firmware and device drivers up-to-date and help you avoid unnecessary server outages. The tool acquires and deploys individual updates and UpdateXpress System Packs (UXSPs) which are integration-tested bundles.

- **Lenovo Essentials Bootable Media Creator**
  The Bootable Media Creator (BOMC) tool is used to create bootable media for offline firmware update.

For more information and downloads, visit the Lenovo XClarity Essentials web page:

**Lenovo XClarity Energy Manager**

Lenovo XClarity Energy Manager is a power and temperature management solution for data centers. It is an agent-free, web-based console that enables you to monitor and manage power consumption and temperature in your data center through the management console. It enables server density and data center capacity to be increased through the use of power capping.

Lenovo XClarity Energy Manager is a licensed product. A single-node XClarity Energy Manager license is included with the XClarity Controller Enterprise (XCC Enterprise) upgrade as described in the Remote Management section. If your server does not have the XCC Enterprise upgrade, Energy Manager licenses can be ordered as shown in the following table.

<table>
<thead>
<tr>
<th>Description</th>
<th>Part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lenovo XClarity Energy Manager Node License (1 license needed per server)</td>
<td>4L40E51621</td>
</tr>
</tbody>
</table>

For more information about XClarity Energy Manager, see the following resources:

- Lenovo Support page:
- Lenovo Information Center:
Lenovo Capacity Planner

Lenovo Capacity Planner is a power consumption evaluation tool that enhances data center planning by enabling IT administrators and pre-sales professionals to understand various power characteristics of racks, servers, and other devices. Capacity Planner can dynamically calculate the power consumption, current, British Thermal Unit (BTU), and volt-ampere (VA) rating at the rack level, improving the planning efficiency for large scale deployments.

For more information, refer to the Capacity Planner web page:

Security

The SE450 offers a number of security features, both electronic and physical.

Physical security features:

- Intrusion detection (optional, CTO only).
- Front security bezel with key lock (optional, available as a field upgrade, but requires the bezel detect module added in the factory)
- EIA mounting flange with security key (optional, CTO only)
  Available EIA bracket that uses a security screw to attach the server to the front flange of the rack cabinet. See EIA bracket with security screw for more information.

Electronic security features include:

- Automatic actions on tamper detection
  In the event of an intrusion or movement, the server can be configured in XCC to perform actions, including server shutdown and disabling remote access to the XCC from the network ports (referred to as the BMC network bridge).
- Self-encrypting (SED) drives that ensure data is secured when the drives are powered off
- Administrator password and a power-on password in UEFI
- Trusted Platform Module (TPM) supporting TPM 2.0, implemented on a mezzanine card, enables advanced cryptographic functionality in the operating system and applications. (not available for customers in PRC)
- Optional support for a secure manufacturing supply chain using Intel Transparent Supply Chain

The server is NIST SP 800-147B compliant.

Details of features are described in the following sections:

- Intrusion switch
- Firmware and TPM 2.0 Security Module
- Security bezel
- Intel Transparent Supply Chain

Intrusion switch

The server supports an intrusion switch that rests against the top cover. In the event that the cover is removed, a Warning event is recorded in XClarity Controller and actions can be taken to secure the server.

The intrusion switch is optional but is only available via CTO orders, not as a field upgrade. See the Internal view of the server for the location of this component.
Table 39. Intrusion switch

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTO only</td>
<td>BMGW</td>
<td>ThinkEdge SE450 Intrusion Switch</td>
</tr>
</tbody>
</table>

**Firmware and TPM 2.0 Security Module**

The SE450 includes a security mezzanine card that plugs into the system board as shown in the **Internal view** of the server. The mezzanine card provides non-volatile storage for configuration data, and a Trusted Platform Module 2.0 (TPM 2.0) chip.

**Note**: The TPM functionality is not available for customers in China

Ordering information is listed in the following table.

Table 40. Firmware and TPM 2.0 Security Module

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
<th>Markets</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTO only</td>

<td>ThinkEdge SE450 Firmware and TPM 2.0 Security Module</td>
<td>All markets except China</td>
</tr>
<tr>
<td>CTO only</td>
<td>BN21</td>
<td>ThinkEdge SE450 Firmware Module for PRC</td>
<td>China only</td>
</tr>
</tbody>
</table>

**Security bezel**

The security bezel is an optional component that mounts on the front of the server that restricts access to networking connectors on the front of the server. In the event that the bezel is removed, an Information event is recorded by XClarity Controller.

The following figure shows the SE450 with security bezel installed.
The security bezel is only available as an option part number and cannot be ordered as part of a CTO order, however the security bezel requires the security bezel detect module in order for the bezel to be recognized as installed by the server and for the LEDs on the security bezel to function. The security bezel detect module is only available CTO by selecting feature BR1K in DCSC.

**Tip:** It is not possible to install the security bezel without first having the bezel detect module installed.

### Table 41. Security bezel ordering information

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>

<tr>
<td>4B37A81735</td>
<td>Option only</td>
<td>ThinkEdge SE450 Security Bezel</td>
<td>Includes a key for the lock and a dust filter. See the Operating environment section. For full functionality, requires the bezel detect module be installed.</td>
</tr>
</tbody>
</table>

The security bezel also duplicates the system LEDs. The layout of the LEDs is identical to the LED grouping on top of the server. See the Local management section for information about the LEDs.

The security bezel also supports the installation of a dust filter as described in the Operating environment section.
Intel Transparent Supply Chain

Add a layer of protection in your data center and have peace of mind that the server hardware you bring into it is safe authentic and with documented, testable, and provable origin.

Lenovo has one of the world’s best supply chains, as ranked by Gartner Group, backed by extensive and mature supply chain security programs that exceed industry norms and US Government standards. Now we are the first Tier 1 manufacturer to offer Intel® Transparent Supply Chain in partnership with Intel, offering you an unprecedented degree of supply chain transparency and assurance.

To enable Intel Transparent Supply Chain for the Intel-based servers in your order, add the following feature code in the DCSC configurator, under the Security tab.

Table 42. Intel Transparent Supply Chain ordering information

For more information on this offering, see the paper *Introduction to Intel Transparent Supply Chain on Lenovo ThinkSystem Servers*, available from https://lenovopress.com/lp1434-introduction-to-intel-transparent-supply-chain-on-thinksystem-servers.

Rack installation

The SE450 server can be installed in a rack cabinet, either 2-post, 4-post long, or 4-post short.

In this section:

- Rail kits
- EIA bracket with security screw
- EIA bracket adjustment

Rail kits

The following table lists the available rail kits. Each kit includes the left and right rails plus mounting hardware.

Table 43. Rail kits

<table>
<thead>
<tr>
<th>Part number</th>
<th>Feature code</th>
<th>Description</th>
<th>300mm chassis</th>
<th>360mm chassis</th>

* 1000mm rail kit and CTO orders: The 1000mm rail kit can only be included in CTO orders provided that the server is installed and shipped in a rack cabinet from the factory. If the order does not include factory installation into a rack cabinet, then the rail kit will need to be ordered separately using the option part number.

The following table summarizes the specifications of the available rail kits.
Table 44. Specifications of the SE450 rail kits

For details on the installation of these kits, see each of the ThinkEdge SE450 rack installation guides, available from the Information Center, [https://thinksystem.lenovofiles.com/help/index.jsp](https://thinksystem.lenovofiles.com/help/index.jsp)

For information on supported rack cabinets, see the Rack cabinets section.

**EIA bracket with security screw**

The SE450 offers two types of EIA brackets (also known as ear brackets or ears):

- Standard EIA bracket - uses thumbscrews to secure the server to the front flange of the cabinet
- Security EIA bracket - uses security screws and key to secure the server to the front flange of the cabinet

The use of the security bracket and key (the key is included with the brackets) aids in preventing unauthorized personnel from removing the server from the rack.

The following figure shows the two EIA bracket types.
EIA bracket adjustment

When installed in a rack cabinet, the EIA brackets on either side of the SE450 chassis can be adjusted to best fit the front cabling and clearance needs of your environment. The EIA brackets can be in one of six different positions as shown in the following figure.

Position 1 locates the server as far back into the rack cabinet as possible, such that the front of the security bezel is flush with the front flange of the cabinet. The distance between positions 1, 2, 3, 4, and 5 is 12.5 mm. Position 6 positions the server as far forward as possible, and is an additional 37.5 mm from position 5, for a total of 100 mm difference between positions 1 and 6.
Figure 15. Adjusting the locations of the EIA brackets on the sides of the server

Floor stand

The SE450 supports being installed in a floor stand in a vertical orientation, as shown in the following figure. The floor stand supports both the 300mm or 360mm chassis, and with or without the security bezel.

Figure 16. SE450 installed in the floor stand kit

The dimensions of the floor stand base are as follows:

- Width: 305 mm (12 inches)
- Depth: 488 mm (19.2 inches)
- Height of the floor stand base: 303 mm (11.9 inches)
- Height of the server installed in the floor stand (to the top of the handle):
  - 300 mm chassis: 584 mm (23 inches)
  - 360 mm chassis: 594 mm (23.4 inches)
Ordering information for the floor stand kit is listed in the following table. The floor stand kit is only available as an option part number and cannot be included in a CTO factory order.

Table 46. Floor stand

<table>

</tbody>
</table>

The contents of the floor stand kit is shown in the following figure.

Figure 17. Contents of the SE450 floor stand kit

For details on the components in the kit and the installation process, see the ThinkEdge SE450 Floor-standing Configuration Guide, available from the Information Center, https://thinksystem.lenovofiles.com/help/index.jsp

Wall mount installation

The SE450 can be mounted on a wall in a vertical orientation. The server can face either left or right, and supports both the 300mm or 360mm chassis, with and without the security bezel.

The wall mount kit includes a base plate. The base plate is mounted to the wall and then the server is attached to the base plate using the top cover, bottom brackets, and side brackets. The dimensions of the base plate are:

• Width: 693 mm (27.3 inches)
• Height: 532 mm (20.9 inches)
The width of the base plate is to allow the support of the standard wall stud spacing in Europe (600mm, 23.6 inches) and in USA (16 inches, 406mm).

**Note:** The maximum weight of the server and wall mount assembly is 30 Kg (66 lbs).

The following figure shows the SE450 installed on a wall in a manufacturing environment.

![SE450 installed on a wall in a manufacturing environment](image)

Figure 18. SE450 installed on a wall in a manufacturing environment

Ordering information for the Wall Mount Kit is listed in the following table.

The wall mount kit is only available as an option part number and cannot be included in a CTO factory order.
Table 47. Wall mount

</tr>
<tr>
<td></td>
<td></td>
<td>- Mounting hardware</td>
</tr>
</tbody>
</table>

The contents of the wall mount kit is shown in the following figure.

Figure 19. ThinkEdge SE450 Wall Mount Kit

The brackets are attached to the server and then the unit is then mounted to the wall plate, as shown in the following figure.

**Tip:** The integrated handles cannot be removed.
For details on the components in the kit and the installation process, see the ThinkEdge SE450 Wall-mounting Configuration Guide, available from the Information Center, https://thinksystem.lenovofiles.com/help/index.jsp

**Operating system support**

The SE450 supports the following operating systems:

- Microsoft Windows Server 2019
- Microsoft Windows Server 2022
- Red Hat Enterprise Linux 7.9
- Red Hat Enterprise Linux 8.4
- Red Hat Enterprise Linux 8.5
- SUSE Linux Enterprise Server 15 SP4
- SUSE Linux Enterprise Server 15 Xen SP4
- VMware ESXi 7.0 U3

For a complete list of supported, certified and tested operating systems, plus additional details and links to relevant web sites, see the Operating System Interoperability Guide: https://lenovopress.com/osig#servers=se450-7d8t

For configure-to-order configurations, the server can be preloaded with VMware ESXi on M.2 cards installed in an M.2 Module. Ordering information is listed in the following table.

Table 48. VMware ESXi preload

**Physical and electrical specifications**
The SE450 has the following overall physical dimensions, excluding components that extend outside the standard chassis, such as EIA flanges, front security bezel (if any), and power supply handles:

300mm chassis:
- Width: 445 mm (17.5 inches)
- Height: 87 mm (3.4 inches)
- Depth: 323 mm (12.7 inches)

360mm chassis:
- Width: 445 mm (17.5 inches)
- Height: 87 mm (3.4 inches)
- Depth: 383 mm (15.1 inches)

The following table lists the detailed dimensions.

For dimensions of the wall mount plate and the floor stand kit, see the following sections:
- Floor stand
- Wall mount installation

Table 49. Detailed dimensions

</tbody>
</table>

The figure below shows the definition of each dimension.
The shipping dimensions (cardboard packaging) of the SE450 are as follows:

- Width: 586 mm (23.1 inches)
- Height: 257 mm (10.1 inches)
- Depth: 555 mm (21.9 inches)
The server has the following maximum weight:
- 300mm chassis: 14.8 kg (32.7 lb)
- 360mm chassis: 17.4 kg (38.4 lb)

Electrical specifications for AC input power supplies:
- Input voltage:
  - 100 to 127 (nominal) Vac, 50 Hz or 60 Hz
  - 200 to 240 (nominal) Vac, 50 Hz or 60 Hz
  - 240 Vdc (input range: 180-300 V dc) (China only)
- Inlet current:
  - 100-127 V:
    - 1100W power supply: 12 A*
    - 1800W power supply: Not supported
  - 200-240 V:
    - 1100W power supply: 6.0 A
    - 1800W power supply: 10 A

* In China, this power supply cannot exceed 10 A current.

Electrical specifications for DC input power supply:
- Input voltage: -44 to -54 Vdc
- Inlet current (1100W power supply): 26 A

**Grounding cable**

The SE450 includes two grounding lugs on the front of the server to enable the connection of a grounding cable. The table below lists the ordering information for the supported cable.

<table>
<thead>
<tr>

</table>

*Field upgrade only:* The Grounding Cable is only available as an option for field upgrades. Not available in CTO orders.

The following figure shows the cable.

![Diagram of the grounding cable](image)

**Figure 22. SE450 grounding cable**
Operating environment

The SE450 server complies with ASHRAE Class A3 specifications with most configurations, and depending on the hardware configuration, also complies with ASHRAE Class A4 specifications.

Configuration requirements

Components installed in the SE450 have the following ambient temperature requirements:

- Persistent Memory is supported up to 40°C ambient temperature
- The following trayless drive is supported up to 35°C ambient temperature:
  - ThinkSystem 2.5" 7mm U.3 7400 PRO 3.84TB Read Intensive NVMe PCIe 4.0 x4 Trayless SSD, 4XB7A80376
- The following hot-swap drive is supported up to 40°C ambient temperature:
  - ThinkSystem 2.5" U.3 7400 PRO 3.84TB Read Intensive NVMe PCIe 4.0 x4 HS SSD, 4XB7A80378
- 360mm chassis config 3 (see Configurations section) is only supported up to 40°C ambient temperature if both of the following are installed:
  - 3 or fewer low profile PCIe adapters
  - 8x 128GB DIMMs installed
  **Note:** If 4 low profile PCIe adapters are installed, there are no thermal restrictions and the server can operate up to 45°C ambient temperature.

Temperature and humidity

The server is supported in the following environment:

- Air temperature:
  - Operating:
    - ASHRAE A2: 10°C to 35°C (50°F to 95°F); the maximum ambient temperature decreases by 1°C for every 300 m (984 ft) increase in altitude above 900 m (2,953 ft).
    - ASHRAE A3: 5°C to 40°C (41°F to 104°F); the maximum ambient temperature decreases by 1°C for every 175 m (574 ft) increase in altitude above 900 m (2,953 ft).
    - ASHRAE A4: 5°C to 45°C (41°F to 113°F); the maximum ambient temperature decreases by 1°C for every 125 m (410 ft) increase in altitude above 900 m (2,953 ft).
  - Server off: -5°C to 55°C (23°F to 131°F)
  - Shipment/storage: -40°C to 70°C (-40°F to 158°F)
- Maximum altitude: 3,050 m (10,000 ft)
- Relative Humidity (non-condensing):
  - Operating
    - ASHRAE Class A2: 8% to 80%; maximum dew point: 21°C (70°F)
    - ASHRAE Class A3: 8% to 85%; maximum dew point: 24°C (75°F)
    - ASHRAE Class A4: 8% to 90%; maximum dew point: 24°C (75°F)
  - Shipment/storage: 8% to 90%
NEBS support

The server supports NEBS Level 3:

- Operating temperature: 5°C to 40°C.
- High altitude operating temperature (1829m to 3960m, 6000ft to 13,000ft): 5°C to 35°C
- Short term operating temp*: -5°C to 55°C
- Humidity: 5% to 85% RH, Non-condensing.
- Maximum rate of change(°C /hr) should ≤ 20 Humidity transition rate should ≤10%/hr.

* Short-term conditions: A period of no more than 96 consecutive hours and a total of not more than 15 days in 1 year. A total of 360 hours in any given year, but no more than 15 occurrences during a 1-year period.

NEBS configuration supported:

- Chassis: 300mm chassis
- Processor: 28-core 165W with standard 2U heat sink
- Memory: 8x 64GB 3200MHz RDIMMs
- M.2: Two 480GB M.2 drives with SATA-RAID M.2 adapter
- Internal storage: 4x 960GB SATA drives
- PCIe adapters: Intel N3000 (Slot 5), Intel ACC100 (Slot 3, 4, 6)
- No OCP

Acoustical noise emissions

The server has the following acoustic noise emissions declaration:

- Sound pressure level (LpA): 1/3rd octave bands:
  - Idling: 37.0 dBA (Minimal), 41.8 dBA (Typical), 41.8 dBA (GPU rich)
  - Operating: 47.1 dBA (Minimal), 47.1 dBA (Typical), 59.4 dBA (GPU rich)

Notes:

- These sound levels were measured in controlled acoustical environments according to procedures specified by ISO7779 and are reported in accordance with ISO 9296.
- The declared acoustic sound levels are based on the following configurations, which may change depending on configuration/conditions:
  - Minimal: 300mm Chassis, 1x 185W/32cores CPU, 8x 16GB RDIMM, 4x 960G SATA SSD, 2x M.2 5300 480GB SATA, 2x Intel E810-DA2, 2 x 1100W PSU
  - Typical: 300mm Chassis, 185W/32 cores CPU, 8x 16GB RDIMM, 2x U.2 P5500 1.92TB NVMe, 2x M.2 5300 480GB SATA, 2x NVIDIA A2 16GB PCIe Gen4 Passive GPU, 1x Mellanox CX6 LX 10/25G, 2x 1100W PSU
  - GPU rich: 360mm Chassis, 165W/28 cores CPU, 8x 16GB RDIMM, 2x U.2 P5500 1.92TB NVMe, 2x M.2 5300 480GB SATA, 2x NVIDIA A30 24GB PCIe Gen4 Passive GPU, 1x Mellanox CX6 LX 10/25G, 2x 1800W PSU

Shock and vibration

The server has the following vibration and shock limits:

- Vibration:
  - Operating: 0.21 G rms at 5 Hz to 500 Hz for 15 minutes across 3 axes
  - Non-operating (in packaging): 1.04 G rms at 2 Hz to 200 Hz for 15 minutes across 6 surfaces
- Shock:
  - Operating: 15 G for 3 milliseconds in each direction (positive and negative X, Y, and Z axes)
  - Non-operating (12 kg to 23 kg, in packaging): 762mm drop height for 1 corner 3 edge 6 surface
- NEBS GR-63:
  - Office vibration: 0.21 G rms at 5 Hz to 100 Hz for 30 minutes across 3 axes
  - Earthquake test: GR63 earthquake zone 4
Particulate contamination

Airborne particulates (including metal flakes or particles) and reactive gases acting alone or in combination with other environmental factors such as humidity or temperature might damage the system that might cause the system to malfunction or stop working altogether.

The following specifications indicate the limits of particulates that the system can tolerate:

- Reactive gases:
  - The reactivity rate of copper coupons shall be less than 200 Angstroms per month (Å/month)
  - The reactivity rate of silver coupons shall be less than 200 Å/month

- Airborne particulates:
  - The room air should be continuously filtered with MERV 8 filters.
  - Air entering a data center should be filtered with MERV 11 or preferably MERV 13 filters.
  - The deliquescent relative humidity of the particulate contamination should be more than 60% RH
  - Data centers must be free of zinc whiskers

For additional information, see the Specifications section of the Setup Guide for the server, available from the Lenovo ThinkSystem Information Center, https://thinksystem.lenovofiles.com/help/index.jsp

Dust filter

The SE450 supports the use of a dust filter which is installed inside the security bezel. The dust filter has a Minimum Efficiency Rating Value (MERV) of 4, per ASHRAE Standard 52.2-2017.

A single dust filter is included with the security bezel as described in the Security section.
Warranty and Support

The ThinkEdge SE450 has a 3-year warranty:

- 7D8T - 3 year warranty

The standard warranty terms are customer-replaceable unit (CRU) and onsite (for field-replaceable units FRUs only) with standard call center support during normal business hours and 9x5 Next Business Day Parts Delivered.

Lenovo’s additional support services provide a sophisticated, unified support structure for your data center, with an experience consistently ranked number one in customer satisfaction worldwide. Available offerings include:

- **Premier Support**
  Premier Support provides a Lenovo-owned customer experience and delivers direct access to technicians skilled in hardware, software, and advanced troubleshooting, in addition to the following:
  - Direct technician-to-technician access through a dedicated phone line
  - 24x7x365 remote support
  - Single point of contact service
  - End to end case management
  - Third-party collaborative software support
  - Online case tools and live chat support
  - On-demand remote system analysis

- **Warranty Upgrade (Preconfigured Support)**
  Services are available to meet the on-site response time targets that match the criticality of your systems.
  - 3, 4, or 5 years of service coverage
  - 1-year or 2-year post-warranty extensions
  - **Foundation Service**: 9x5 service coverage with next business day onsite response. YourDrive YourData is an optional extra (see below).
  - **Essential Service**: 24x7 service coverage with 4-hour onsite response. Bundled with YourDrive YourData.

- **Managed Services**
  Lenovo Managed Services provides continuous 24x7 remote monitoring (plus 24x7 call center availability) and proactive management of your data center using state-of-the-art tools, systems, and practices by a team of highly skilled and experienced Lenovo services professionals.

  Quarterly reviews check error logs, verify firmware & OS device driver levels, and software as needed. We’ll also maintain records of latest patches, critical updates, and firmware levels, to ensure your systems are providing business value through optimized performance.

- **Technical Account Management (TAM)**
  A Lenovo Technical Account Manager helps you optimize the operation of your data center based on a deep understanding of your business. You gain direct access to your Lenovo TAM, who serves as your single point of contact to expedite service requests, provide status updates, and furnish reports to track incidents over time. In addition, your TAM will help proactively make service recommendations and manage your service relationship with Lenovo to make certain your needs are met.
- **Enterprise Server Software Support**
  Enterprise Software Support is an additional support service providing customers with software support on Microsoft, Red Hat, SUSE, and VMware applications and systems. Around the clock availability for critical problems plus unlimited calls and incidents helps customers address challenges fast, without incremental costs. Support staff can answer troubleshooting and diagnostic questions, address product comparability and interoperability issues, isolate causes of problems, report defects to software vendors, and more.

- **YourDrive YourData**
  Lenovo’s YourDrive YourData is a multi-drive retention offering that ensures your data is always under your control, regardless of the number of drives that are installed in your Lenovo server. In the unlikely event of a drive failure, you retain possession of your drive while Lenovo replaces the failed drive part. Your data stays safely on your premises, in your hands. The YourDrive YourData service can be purchased in convenient bundles and is optional with Foundation Service. It is bundled with Essential Service and Advanced Service.

- **Health Check**
  Having a trusted partner who can perform regular and detailed health checks is central to maintaining efficiency and ensuring that your systems and business are always running at their best. Health Check supports Lenovo-branded server, storage, and networking devices, as well as select Lenovo-supported products from other vendors that are sold by Lenovo or a Lenovo-Authorized Reseller.

Examples of region-specific warranty terms are second or longer business day parts delivery or parts-only base warranty.

If warranty terms and conditions include onsite labor for repair or replacement of parts, Lenovo will dispatch a service technician to the customer site to perform the replacement. Onsite labor under base warranty is limited to labor for replacement of parts that have been determined to be field-replaceable units (FRUs). Parts that are determined to be customer-replaceable units (CRUs) do not include onsite labor under base warranty.

If warranty terms include parts-only base warranty, Lenovo is responsible for delivering only replacement parts that are under base warranty (including FRUs) that will be sent to a requested location for self-service. Parts-only service does not include a service technician being dispatched onsite. Parts must be changed at customer’s own cost and labor and defective parts must be returned following the instructions supplied with the spare parts.

Lenovo Service offerings are region-specific. Not all preconfigured support and upgrade options are available in every region. For information about Lenovo service upgrade offerings that are available in your region, refer to the following resources:

- **Service part numbers in Lenovo Data Center Solution Configurator (DCSC):**
  [http://dcsc.lenovo.com/#/services](http://dcsc.lenovo.com/#/services)

- **Lenovo Services Availability Locator**

For service definitions, region-specific details, and service limitations, please refer to the following documents:

- **Lenovo Statement of Limited Warranty for Infrastructure Solutions Group (ISG) Servers and System Storage**

- **Lenovo Data Center Services Agreement**
Services

Lenovo Services is a dedicated partner to your success. Our goal is to reduce your capital outlays, mitigate your IT risks, and accelerate your time to productivity.

Note: Some service options may not be available in all countries. For more information, go to https://www.lenovo.com/services. For information about Lenovo service upgrade offerings that are available in your region, contact your local Lenovo sales representative or business partner.

Here’s a more in-depth look at what we can do for you:

- **Asset Recovery Services**
  Asset Recovery Services (ARS) helps customers recover the maximum value from their end-of-life equipment in a cost-effective and secure way. On top of simplifying the transition from old to new equipment, ARS mitigates environmental and data security risks associated with data center equipment disposal. Lenovo ARS is a cash-back solution for equipment based on its remaining market value, yielding maximum value from aging assets and lowering total cost of ownership for your customers. For more information, see the ARS page, https://lenovopress.com/lp1266-reduce-e-waste-and-grow-your-bottom-line-with-lenovo-ars.

- **Assessment Services**
  An Assessment helps solve your IT challenges through an onsite, multi-day session with a Lenovo technology expert. We perform a tools-based assessment which provides a comprehensive and thorough review of a company’s environment and technology systems. In addition to the technology based functional requirements, the consultant also discusses and records the non-functional business requirements, challenges, and constraints. Assessments help organizations like yours, no matter how large or small, get a better return on your IT investment and overcome challenges in the ever-changing technology landscape.

- **Design Services**
  Professional Services consultants perform infrastructure design and implementation planning to support your strategy. The high-level architectures provided by the assessment service are turned into low level designs and wiring diagrams, which are reviewed and approved prior to implementation. The implementation plan will demonstrate an outcome-based proposal to provide business capabilities through infrastructure with a risk-mitigated project plan.

- **Basic Hardware Installation**
  Lenovo experts can seamlessly manage the physical installation of your server, storage, or networking hardware. Working at a time convenient for you (business hours or off shift), the technician will unpack and inspect the systems on your site, install options, mount in a rack cabinet, connect to power and network, check and update firmware to the latest levels, verify operation, and dispose of the packaging, allowing your team to focus on other priorities.

- **Deployment Services**
  When investing in new IT infrastructures, you need to ensure your business will see quick time to value with little to no disruption. Lenovo deployments are designed by development and engineering teams who know our Products & Solutions better than anyone else, and our technicians own the process from delivery to completion. Lenovo will conduct remote preparation and planning, configure & integrate systems, validate systems, verify and update appliance firmware, train on administrative tasks, and provide post-deployment documentation. Customer’s IT teams leverage our skills to enable IT staff to transform with higher level roles and tasks.
Integration, Migration, and Expansion Services
Move existing physical & virtual workloads easily, or determine technical requirements to support increased workloads while maximizing performance. Includes tuning, validation, and documenting ongoing run processes. Leverage migration assessment planning documents to perform necessary migrations.

Regulatory compliance
The SE450 conforms to the following standards:

- ANSI/UL 62368-1
- IEC 62368-1 (CB Certificate and CB Test Report)
- FCC - Verified to comply with Part 15 of the FCC Rules, Class A
- Canada ICES-003, issue 7, Class A
- CSA C22.2 No. 62368-1
- CISPR 32, Class A, CISPR 35
- Argentina IEC 60950-1
- Japan VCCI, Class A
- Taiwan BSMI CNS13438, Class A; CNS14336-1; Section 5 of CNS15663
- CE, UKCA Mark (EN55032 Class A, EN62368-1, EN55024, EN55035, EN61000-3-2, EN61000-3-3, (EU) 2019/424, and EN50581-1 (RoHS))
- Korea KN32, Class A, KN35
- Russia, Belorussia and Kazakhstan, TP EAC 037/2016 (for RoHS)
- Russia, Belorussia and Kazakhstan, EAC: TP TC 004/2011 (for Safety); TP TC 020/2011 (for EMC)
- Australia/New Zealand AS/NZS CISPR 32, Class A; AS/NZS 62368.1
- UL Green Guard, UL2819
- Energy Star 3.0
- EPEAT (NSF/ ANSI 426) Bronze
- China CCC certificate, GB17625.1; GB4943.1; GB/T9254

</tr>
</tbody>
</table>

For information about these rack cabinets, see the Lenovo Rack Cabinet Reference: https://lenovopress.com/lp1287-lenovo-rack-cabinet-reference

The SE450 is also supported in 3rd-party rack cabinets, as listed in the following table. Note that some of mounting position may interfere with the front door latch of the cabinet.

Lenovo Financial Services

Lenovo Financial Services reinforces Lenovo’s commitment to deliver pioneering products and services that are recognized for their quality, excellence, and trustworthiness. Lenovo Financial Services offers financing solutions and services that complement your technology solution anywhere in the world.

We are dedicated to delivering a positive finance experience for customers like you who want to maximize your purchase power by obtaining the technology you need today, protect against technology obsolescence, and preserve your capital for other uses.

We work with businesses, non-profit organizations, governments and educational institutions to finance their entire technology solution. We focus on making it easy to do business with us. Our highly experienced team of finance professionals operates in a work culture that emphasizes the importance of providing outstanding customer service. Our systems, processes and flexible policies support our goal of providing customers with a positive experience.

We finance your entire solution. Unlike others, we allow you to bundle everything you need from hardware and software to service contracts, installation costs, training fees, and sales tax. If you decide weeks or months later to add to your solution, we can consolidate everything into a single invoice.

Our Premier Client services provide large accounts with special handling services to ensure these complex transactions are serviced properly. As a premier client, you have a dedicated finance specialist who manages your account through its life, from first invoice through asset return or purchase. This specialist develops an in-depth understanding of your invoice and payment requirements. For you, this dedication provides a high-quality, easy, and positive financing experience.

For your region-specific offers, please ask your Lenovo sales representative or your technology provider about the use of Lenovo Financial Services. For more information, see the following Lenovo website:
