

# 5 REASONS TO RUN NUTANIX WITH VMWARE

## WHY DOES NUTANIX HCI RUN GREAT WITH VMWARE?

It's simple. It was designed with choice from the start. Nutanix was built to deliver a robust, easy-to-deploy, open, fully converged HCI solution for VMware virtualization and end-user computing environments.

### REASON #1

#### Choice of Hypervisor

The Nutanix architecture was designed for choice and flexibility. Nutanix customers benefit from the same underlying HCI functionality whether they choose to run with VMware ESXi, Microsoft Hyper-V, or use the built-in hypervisor Nutanix AHV.

More than

# 10K

customers run ESXi on the Nutanix HCI platform.

A testament to commitment to interoperability and the value that VMware users see in Nutanix.

### REASON #2

#### Seamless Integration

Nutanix HCI supports key virtualization capabilities including vMotion, DRS, and HA and integrates seamlessly into your existing vCenter management stack. Advanced Nutanix capabilities such as File and Object storage, as well as Database Automation, plug easily into your VMware environment.

### REASON #3

#### Fully Managed Mixed Stack

Nutanix Cloud Manager unifies management, analytics, and orchestration of your entire Nutanix and VMware environment through a single, elegant console. Simplify planning, monitoring, remediation, and application automation for your complete VMware environment, both HCI and traditional.

### REASON #4

#### Advanced Storage Capabilities

High performance snapshots and instant clones are built into the Nutanix architecture, so you can bring the simplicity of HCI to your environment without giving up critical storage functionality. Configure storage policies such as encryption on a per-VM basis, for even greater flexibility than before.

#### Customer Rating

Nutanix is proud to have earned an NPS of over 90 for the last seven years running!

### REASON #5

#### Make Hybrid MultiCloud a Reality

Get a leg up on true public and private cloud interoperability and mobility with HCI, a foundational building block of the Nutanix Cloud Platform.

Nutanix is a very flexible, cost effective, and extremely scalable platform. It not only enables us to meet all of our current project goals, it is very easy to modify the configurations to meet future needs as well.
