

SonicWall NGFW Gen 7

Cybercriminals have never been stealthier. To stop them, you need a comprehensive, integrated solution combining malware analysis, encrypted traffic inspection, cloud app security and reputation services — and you need it within budget. Powered by the latest revolutionary SonicOS, SonicWall's new generation of next-gen firewalls deliver industry-leading performance, high port density and other features you'd pay more for anywhere else.

Reasons to Upgrade to Gen 7

Gen 5 and Gen 6 are in retirement mode

Gen 5 is in Limited Retirement Mode (LRM), which means that we will no longer develop or release firmware updates or new features for Gen 5 products. Gen 6 is in Active Retirement Mode (ARM), which means that we are no longer actively manufacturing or selling Gen 6 products.

Secure upgrade program

You can trade in your old SonicWall device and receive special pricing and subscription options on a newer replacement product.

Security for the future

Gen 7 has extra security features including TLS 1.3, DNS Filtering and Secure SD-WAN.

Cloud based management, analytics and reporting and Network Security Manager (NSM)

With Gen 7, advanced edition customers get cloud-based management for centralized management and reporting of all SonicWall firewalls, switches and access points.

Future innovation and investment

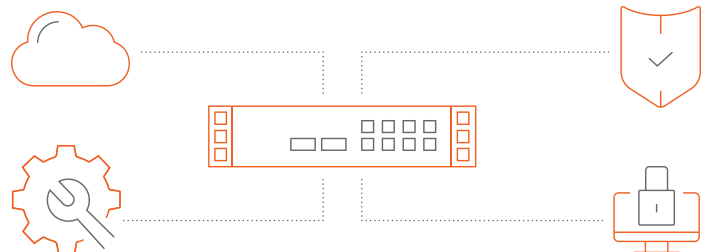

SonicWall made investments into SonicOS and NSM while continuing to make heavy investments in the upcoming releases to support innovation.

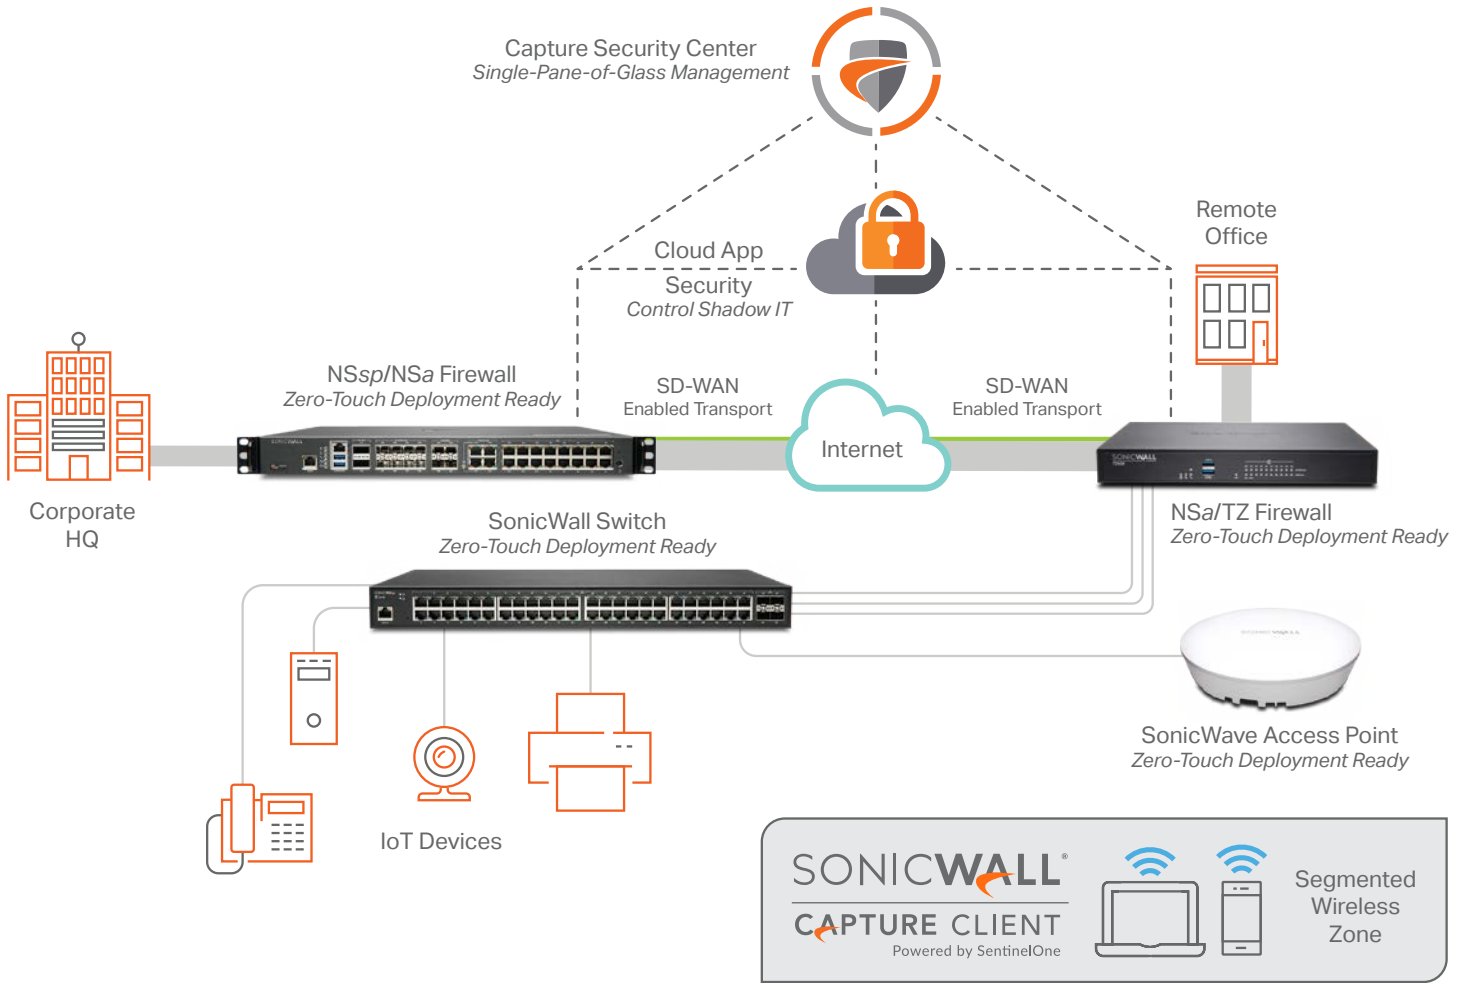

Performance and capacity

Gen 7 has 3x better threat, HTTP/SSL and DPI performance while supporting many more connections for growing businesses when compared to Gen 6.

Promotions - 3 & Free

Available through December 2023

CAPABILITY	GEN 6 / 6.5	GEN 7.0
