

Veritas Alta Archiving

Software as a Service Archiving,
Supervision and eDiscovery.

Overview

Veritas Alta™ Archiving (formerly known as Enterprise Vault.cloud) is a fully integrated cloud archive platform to capture, ingest, supervise, and discover data for your organization's compliance needs enabling you to reduce costs and increase productivity.

Captures All Content

Our integrated Veritas Alta™ Capture content collection solution captures 120+ content sources above and beyond email such as voice, video, collaboration content, chat, social media and more.

Simplifies Retention Management

Veritas Alta Archiving interfaces seamlessly with Microsoft 365, Google Workspace Enterprise, as well as on-premises mail systems such as Microsoft Exchange Server or HCL Domino and over 120+ other content sources to ensure information is properly retained. A default retention policy may be applied to all archived information, to specific individuals or individual items via rich pattern-based classification policies, so that customized retention periods can be assigned. Even archived content from departed employees is covered by your retention policies.

Migrate from On-Premises Archives to the Cloud

Veritas Alta Archiving helps organizations fulfill their cloud initiatives by providing a proven cloud archiving solution to meet your supervision and discovery requirements. On-premises archiving customers on any platform, including Enterprise Vault, can benefit from industry-leading migration professionals and tools for migrations of all sizes.

Enterprise Vault customers migrating to Veritas Alta Archiving can take advantage of feature parity and have the ability to conduct rapid, safe migrations using our new Direct Migrator feature in Veritas Alta Archiving. Direct Migrator can migrate Enterprise Vault to Veritas Alta Archiving with full fidelity and speed, up to 10x faster than a typical migration. It can even move Discovery and Supervision work product.

Veritas Alta Archiving Helps Customers:

- Preserve email and 120+ other content types by policy, as journaled records in a high-availability repository, protected against unauthorized or accidental deletion.
- Classify content and identify the most important items to reduce risk and increase Supervision and eDiscovery review and monitoring efficiency.
- Ensure retention practices for regulated organizations comply with applicable laws, surveillance, and eDiscovery practices are defensible.
- Provide rapid search, legal hold, case management and eDiscovery workflow to reduce cost, and improve the productivity of both IT and litigation support staff.
- Transition from CAPEX to OPEX financial accounting models, offering subscription licensing for a predictable monthly fee to stabilize and control archiving costs, regardless of data growth.

Benefits of using Direct Migrator:

- Migrates Discovery Accelerator/ Compliance Accelerator work product.
- Cost effective.
- 10x faster than other migration solutions.
- Single license required — no need to pay twice.
- Targeted Collection of Enterprise Vault content from Veritas Alta Archiving allowing full access to your content during the migration.

Streamlines Compliance and Ensures Defensible eDiscovery

Veritas Alta Archiving leverages native journaling capabilities of communications systems and provides clients with a purpose-built collection tool to capture email, attachments, and all message metadata. Archived content is time-stamped and serialized with a unique signature to ensure authenticity. The journaling process ensures full content and recipient capture, so you always know who received what, and when, regardless of user behavior. Content can be proactively archived and stored in adherence to financial regulations. Content can be proactively archived and stored on 17a-4 immutable storage, if required, or it can be reactively collected from the source and produced as needed.

Veritas Alta™ eDiscovery enables Legal Hold to be applied broadly across keyword searches and users—or to target specific legal custodians—without putting mass restrictions on large groups or domains of users or challenging retention management requirements established to address regulatory compliance. Whether legal hold is in place or not, with Veritas Alta Archiving and journaling, even if an end-user deletes or modifies a message in their Inbox or Personal Folders, the original copy remains in the journaled archive.

Veritas Alta Archiving search and eDiscovery capabilities provide workflows to quickly scan massive amounts of data, iteratively filter out non-relevant results, then collect and organize the results by cases or legal matters. Millions of records can be searched and collated in a matter of seconds. When collection is complete the results can be made available online to outside legal partners. During review, role-based access controls help ensure that data is properly handled so that a secure evidentiary chain of custody is always automatically maintained. When it is time to produce your content for external consumption you can quickly and efficiently export your content (something you can't assume with a cloud platform).

A Compliance-Ready, Best Practice Platform

Veritas Alta Archiving enhances your Microsoft 365, Google Workspace, and overall information governance by providing unique Best Practice compliance, and eDiscovery benefits:

- Standardizes retention management compliance through automation and by providing proof of policy-driven retention processes.
- Satisfy strict legal requirements by immutably journaling all records and ensuring a secure chain of custody for handling evidentiary data.
- Improves Investigation Workflow by granting role-based access to enable segregated work, allowing some staff to search and collect and others to only review.
- Streamlines email migration, simplifying your move to cloud-based email from traditional on-premises email systems by archiving your legacy data first—whether it is stored on tape, PSTs/NSFs, or trapped within existing on-premises servers.
- Discover content in the cloud or on-premises with cloud-based Veritas Alta eDiscovery.

Veritas Alta eDiscovery

Veritas Alta eDiscovery is a cloud-based, end-to-end eDiscovery solution that enables organizations to collect, review and produce electronically stored information for your organization's legal and investigation needs. This SaaS eDiscovery software can be paired with the Veritas Alta Archiving archiving solution for your discovery and compliance needs. Veritas Alta eDiscovery provides a complete discovery solution in one step: defensible collection of your organization's relevant content sources, purpose-built review of all types of data, and efficient production of your relevant documents.

- Accelerate eDiscovery and other investigative inquiries with scalable grid architecture, advanced indexing technology and powerful search capabilities that deliver results in seconds.
- Streamline matter management by giving your organization's legal team and outside counsel direct access to your repository with a built-in collaborative workflow that allows them to share the review workload across multiple reviewers, quickly cull through search results, and apply work product to relevant items.
- Minimize disruption to your organization's IT team by allowing designated internal and external reviewers and administrators to perform self-service online exports of search results.
- Optimize review with native collaboration and file content review interface.

Veritas Alta Surveillance

Veritas Alta™ Surveillance is a powerful compliance solution to perform supervisory review of communications and collaboration content to address regulatory requirements for financial, insurance and other industries. As Veritas Alta Archiving provides the compliant storage, retention and capture of all regulated communication and collaboration content that needs to be supervised, Veritas Alta Surveillance provides an enterprise grade, purpose-built interface for compliance teams to perform regulatory surveillance.

Veritas Alta Surveillance provides a complete compliance solution:

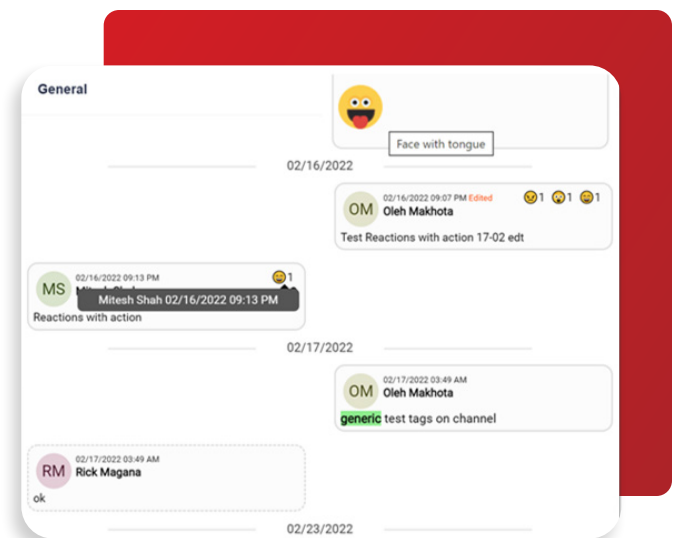

- Create and manage departments
- Assign roles and access
- Automate search and sampling
- Design reviewer workflows
- Reporting and auditing built right in

Veritas Alta Surveillance is designed to optimize both compliance management and reviewer experiences to reduce organizational risk, eliminate reviewer fatigue, and help organizations increase their findings while reducing false positives.

Incorporate the use of:

- Machine learning
- Natural Language Processing
- Automated classification
- Continuous Active Learning
- Noise reduction features

Veritas Alta Surveillance modernizes supervision for many of our clients providing significant reductions in noise while increasing findings by 300% and more.

Veritas Alta Archiving Service

The core Veritas Alta Archiving service consists of the journal data archive system and its web-based management applications, plus optional Personal Archive for end-user search and retrieval and Discovery Archive for federated search and eDiscovery. Other services available with Veritas Alta Archiving include the following:

Optional Services

- **Folder Sync Service**—FolderSync synchronizes users' existing Outlook folder structures in Enterprise Vault Personal.cloud archive, allowing users to seamlessly view their archive folder structure just as they would their inboxes.
- **Classification Integration**—Utilizing the same classification engine as Enterprise Vault and other Veritas products, Veritas Alta Archiving can classify archived information and apply tags, where there are policy matches, to help streamline Supervision and eDiscovery processes.
- **Veritas Enterprise Vault Mailbox Continuity**—An add-on feature for Microsoft 365 / Exchange Online that helps maximize email availability and guard against disruption and data loss that can result from an email outage. The service automatically activates when an outage occurs, allowing your users to continue sending and receiving messages via their archive while the mail system is unavailable.
- **Data Ingestion Service**—Veritas can import (ingest) Enterprise Vault on-premises data and legacy email data from your email environment so that you can consolidate and retain all of your data in long-term storage in a single location and migrate your on-premises communications and archiving solutions to the cloud.

Complementary Services

- **Enterprise Vault Collector Agent**—Perform targeted collections from existing on-premises Enterprise Vault environments. This allows customers to shift their archiving operations to Veritas Alta Archiving and perform consolidated discovery against both Enterprise Vault and Veritas Alta Archiving from Veritas Alta eDiscovery.
- **Usage Notifications**—Proactively manage your license subscription by leveraging notifications that flag when a specific percentage of committed usage is exceeded.
- **Veritas Alta Archiving Cloudlink and M365 Sync Tools**—A synchronization tool for your enterprise directory Azure Active Directory, Microsoft Active Directory or Domino Directory. In simple terms, each time a new user is created, a new archive account is automatically provisioned for them in Veritas Alta Archiving.

About Veritas

Veritas Technologies is a leader in multi-cloud data management. Over 80,000 customers—including 95 percent of the Fortune 100—rely on Veritas to help ensure the protection, recoverability, and compliance of their data. Veritas has a reputation for reliability at scale, which delivers the resilience its customers need against the disruptions threatened by cyberattacks, like ransomware. No other vendor is able to match the ability of Veritas to execute, with support for 800+ data sources, 100+ operating systems, 1,400+ storage targets, and 60+ clouds through a single, unified approach. Powered by Cloud Scale Technology, Veritas is delivering today on its strategy for Autonomous Data Management that reduces operational overhead while delivering greater value.
