

## Multi-Cloud Technical Assessment

Gain complete visibility into your infrastructure and start your cloud journey with a proper roadmap

Companies commonly lack granular visibility into their infrastructure. Without this in-depth insight into your and workloads, it's difficult to quantify the effort, cost, and benefits of moving to the cloud. Migrating to the cloud without properly sizing your infrastructure or understanding your bandwidth utilization or workload dependencies can result in significant waste.

### Use Cases

Common scenarios when you need a multi-cloud assessment include:

- Data center contracts are expiring
- Acquisitions must be integrated quickly
- Total cost of ownership is required to better understand the cloud journey
- Software is reaching end of support

### Key Benefits

A multi-cloud assessment from SHI will prepare you for your cloud journey by providing a cloud agnostic plan that includes identifying cloud-ready workloads, defining the right migration method, and understanding the post-migration costs

- Gain a better understanding of the potential impact on the network for every workload you migrate
- Understand the application dependencies and performance requirements of each workload
- Plan workload migration groups based on application dependencies
- Compare pricing models to determine the right cloud and right migration path for your business

Contact your SHI Account Executive today and learn how easy it can be to start your journey.
