

Course Outline

Network Automation with Python and Ansible Course NETPYA: 4 days Instructor Led

All Cisco courses are delivered by a Cisco Authorized Platinum Learning Partner

About this course

No two networks are the same! Learn to automate your network with a Python and Ansible skillset. Course can be taught across all major (and most minor) network vendors. Course demonstrations can be adapted to best-fit the customer's network to ensure all lessons have maximum relevance.

Audience profile

- Network Administrators
- Ansible devs
- Python devs
- Administrators interested in Automation
- Individuals interested in devops, specifically for networking

At course completion

This course teaches students to blend Python skillsets with Ansible through the lens of automating networks. Automation techniques for the most popular vendor (incl. Cisco, Juniper, Arista) will be subjects of study, however, students may request examples from vendors within their own environments. Topics begin with a focus on automating networks with Python; this skill set is then folded into a broadening understanding of automating with Ansible. Students will have programmatic experience automating enterprise class networks by the conclusion of this course (includes writing custom Ansible modules with Python).

Course Outline

Day 1 – Critical Python Catchup & Review

- Overview of Python and Ansible
- Python white space rules & best practices
- Printing and more Printing
- Date types and Variables
- Packing and Unpacking Variables
- f Strings
- Conditional expressions
- Relational and Boolean operators
- Lists, Tuples, Dictionaries
- Indexing and slicing
- Built-in functions
- Iterating with Loops (for and while)
- Working with files
- Software Control Management (SCM) (Git, Github, Bitbucket, Cloudshare, etc.)

Course Outline

- Using Python to access REST interfaces
- Working with JSON
- Python, Ansible and Paramiko
- Using Paramiko to SSH with keys and passwords
- RESTful API review
- API keys
- Paramiko Review
- Using Paramiko to SFTP with keys and passwords

Day 02 – Python and Network Automation

- Introduction to Netmiko (automating routers and switches)
- Using Netmiko to send commands to / from network devices
- Working with YAML
- Converting JSON to YAML with Python
- Ansible keywords
- YAML and JSON for data exchange
- Ansible and YAML
- Ansible Playbook components
- Tying together Python and Ansible – Using Python within Ansible
- Ansible Network Modules
- What is new in Ansible (most current updates / release notes)
- Network Agnostic modules
- Writing network playbooks
- Reviewing the construction of network playbooks
- Writing Ansible playbooks that respond to network failures

Day 03 – Blending Python and Ansible Skillsets

- Review how to use Python within Ansible
- Calling Python scripts with Ansible
- Jinja2 Templating Engine for Python (and Ansible)
- Using Templates in Ansible playbooks
- Jinja2 filters, looping, and other useful tricks for automating with Ansible
- Playbook tagging for selective runs
- When to use Python and when to use Ansible
- “Big Picture” options for using Python & Ansible within your Network
- Ansible Roles

Course Outline

Day 04 – Customizing Ansible with Python

- Review – Running Scripts with Ansible
- Prompting for Ansible user input
- Ansible Galaxy & Getting at Roles
- Writing a custom Ansible Module with Python
- Ansible “Engine” vs Ansible “Tower” – marketing hype, capabilities, costs, etc.
- Case Study: Automate your Enterprise Network
- When to use Python and when to use Ansible
- Writing your own Ansible modules in Python
- “Big Picture” options for using Python & Ansible within your Network
- Overview – NETCONF / YANG and what they mean for Python and Ansible
- Molecule – Testing your roles

Lab Outline

- Setting up your development machine
 - Using & Installing Python
 - Complementary Software (Visual Studio Code, Atom, Notepad++)
 - Making a Github account
- Python Lists
 - Data within mixed lists
 - Understanding More about Lists
- Python Dictionaries
 - Getting dir(obj) help() and pydoc
- Managing and Manipulating files and folders
 - Copying Files and Folders
 - Moving and Renaming Files and Folders
- Using Python if statements
- Paramiko
 - Paramiko - SSH with RSA Keys
 - Paramiko - SFTP with UN and PW
- Interacting with API's
 - API's – Cisco DNA Center
 - API's - SDWAN
- Running Netmiko
- Running your first Playbook
 - Debug Module
 - Playbook Prompts
 - register and when

Course Outline

- EOS Get Config and Archive
- Agnostic Network Modules
 - Network Playbook Error Handling
 - Network Playbook Precheck
 - Network Playbooks with Roles and Rollbacks
 - Securing Playbooks with Vault
 - Network Playbooks, Set Fact, and Fail
 - Debug, Loops, and YAML Lists
- Running a script with Ansible
- Jinja Filters
- Ansible, Python Methods, and Jinja Filters
- Ansible and APIs
- Python and Ansible
- Writing an Ansible Module with Python
